Foreign-Trained Registered Nurses in the United States

International Symposium on Past and Future Trends of the Health Workforce

Barcelona, Spain
April 21-23, 2005

Jean Moore, Director
Center for Health Workforce Studies
School of Public Health, SUNY at Albany

Overview of Paper

- Examines foreign-trained RNs in the U.S. using available data sets on RNs in the U.S.
- Provides a basic description of foreign-trained RNs in the US, including demographics, work settings, source countries, destination states.
- Assesses the contribution that foreign-born RNs, of which foreign-trained RNs comprise a large subset, make to the diversity of the RN workforce in the US.
The Center for Health Workforce Studies at the University at Albany

- Conducts studies of the supply, demand, use and education of the health workforce
- Committed to collecting and analyzing data to understand workforce dynamics and trends
- Goal to inform public policies, the health and education sectors and the public
- One of six regional centers with a cooperative agreement with HRSA/Bureau of Health Professions
Methods

- Demographic and trend data on foreign-trained nurses were drawn from the 1980-2000 National Nurse Sample Surveys. Analyses included RNs who reported that they were active in nursing.
- Data used to compare foreign-born RNs with the foreign-born population for the U.S. and New York City were drawn from the 2000 Decennial Census Public Use Microdata Sample (PUMS).
Methods

- PUMS analysis included RNs who
  - self-reported their occupation as “registered nurse”,
  - reported their employment status as “employed, at work”
  - reported their educational level as “more than high school”
  - were classified as “foreign-born” if their self-reported place of birth was outside the 50 states and the District of Columbia.

- PUMS analyses of New York City compared individuals who resided in the New York, NY primary metropolitan statistical area (PMSA) and RNs who reported their place of work to be the New York, NY PMSA.
FINDINGS:
Foreign-trained RNs comprised 4% of the active RNs in the United States in 2000

The Number and Percent of Active Foreign-Trained RNs in the United States, 1980 – 2004

Center for Health Workforce Studies
School of Public Health – University at Albany, SUNY, April 2005
FINDINGS:
More foreign-trained RNs were actively employed in nursing than RNs overall

Percent RNs in the US Who Are Employed in Nursing
All RNs vs. Foreign-Trained RNs

Center for Health Workforce Studies
School of Public Health – University at Albany, SUNY, April 2005
FINDINGS:
Four countries provided the majority of foreign-trained RNs

Percent of Active Foreign-Trained RNs in the United States

Center for Health Workforce Studies
School of Public Health – University at Albany, SUNY, April 2005
**FINDINGS:**
The majority of foreign-trained RNs practiced in five states

Percent of Active RNs Practicing in Selected States
All RNs vs. Foreign-Trained RNs

FINDINGS:

Foreign-born RNs dramatically increase the diversity of the RN workforce

Source: U.S. Decennial Census, 2000, Public Use Microdata Sample

Center for Health Workforce Studies
School of Public Health – University at Albany, SUNY, April 2005
The distribution of RNs by country of birth is fairly well-matched to that of the US population.

Study Limitations

Data limitations

- Data provided in the demographic profile represents estimates of foreign-trained RNs since there are no comprehensive data sets on this cohort of RNs in the US.
- The data presented on the diversity of the nursing workforce was based on the number of foreign-born RNs since there are no data sets available to support a comparable analysis of foreign-trained RNs.
Consideration for Future Studies: Research Questions

- Were reasons for migrating consistent with the subsequent experiences of foreign-trained RNs?
- How well oriented are foreign-trained RNs to new nursing roles and responsibilities?
- To what extent do foreign-trained RNs provide safe and effective nursing care?
