## Preface: Physician Supply in New Mexico, 2006

This report presents an overview on the supply and distribution of physicians practicing in New Mexico. It is designed to help planners, policy makers, and the public make informed decisions about the adequacy of the physician workforce in their communities, regions, and the state based on accurate information.

Extensive data on physicians practicing in New Mexico are presented in this report ranging from aggregate counts of physicians and full-time equivalent physicians and practitioner-per-population ratios (to facilitate comparisons across counties and regions of the state) to descriptive statistics on the demographic and practice characteristics of New Mexico's physicians. The report begins with an overview on the supply and distribution of physicians practicing in New Mexico in 2006. County-level and state-level profiles as well as profiles of selected specialties<sup>1</sup> are presented in the latter portion of the report. Please refer to the Appendices at the end of this report for information about the data used to generate this report; data limitations; and definitions used in this report.

This report was prepared by the Center for Health Workforce Studies at the School of Public Health, University at Albany, State University of New York, for the New Mexico Health Policy Commission.

The Center for Health Workforce Studies provides timely, accurate data and conducts policy-relevant research about the health workforce. This report was prepared by Gaetano J. Forte. The views expressed in this report are those of the Center for Health Workforce Studies and do not necessarily represent positions or policies of the School of Public Health, University at Albany, State University of New York, or the New Mexico Health Policy Commission.

*December 2007*

---

<sup>1</sup> In order to protect and respect the privacy of individual physicians, counties with fewer than 5 practicing physicians and specialties with fewer than 5 practicing physicians were not profiled individually, however, they were included in statewide aggregates.

---

## Acknowledgments

The Center for Health Workforce Studies wishes to acknowledge the New Mexico Health Policy Commission's role in coordinating the distribution of the surveys to physicians licensed in New Mexico. In particular, the Center wishes to thank Kevin McMullan and Peggy Schummers for their contribution to the data collection effort.

## Physician Supply in New Mexico, 2006

## Introduction

Physicians are central to the delivery of health care to the citizens of New Mexico. This report provides a variety of quantitative measures of the size, distribution, and characteristics of the physician workforce in the state. An effort has been made to present tables and charts that reveal patterns to help readers better understand the dynamics of the physician workforce and to design programs and policies to improve access to health care in New Mexico.

## Physician Supply Overview

In 2006, more than 7,000 physicians held licenses from the New Mexico Medical Board or the New Mexico Osteopathic Examiners Board to practice medicine in the state of New Mexico. At the beginning of 2007 through the summer, the Center for Health Workforce Studies at the School of Public Health, University at Albany, State University of New York in collaboration with the New Mexico Health Policy Commission conducted a census survey of the licensed physicians in New Mexico. The survey instrument was based largely on a similar survey conducted in 2002 by the same parties. The responses to this survey form the basis for the tabulations presented in this report. A copy of the survey is included in Appendix A. Complete technical details related to the survey and its conduct are described in Appendix B. Definitions of terms used in this report can be found in Appendix C.

**Figure 1a. Stepdown of Physicians Licensed in New Mexico, 2001 and 2006**

In October 2006, there were 7,196 physicians licensed by the New Mexico Medical Board or the New Mexico Osteopathic Examiners Board (Figure 1a). Of those, 2,348 (33%) physicians were found to practice medicine exclusively outside the boundaries of New Mexico. Of the remaining 4,848 physicians, 846 (17%) were found to be retired or otherwise inactive in medicine. Of the remaining 4,002 physicians, 144 (4%) were found to practice non-patient care medicine (e.g., teaching, research, and administration) exclusively. The remaining 3,858 were found to provide patient care services within the boundaries of New Mexico. This group of physicians makes up the active patient care supply of physicians in New Mexico in 2006.

Between 2001 and 2006, New Mexico experienced growth in the number of physicians licensed to practice medicine and the number of physicians practicing in the state. Comparing the physicians licensed to practice medicine in New Mexico in 2006 to those licensed to practice medicine in 2001, there were slightly more than 1,000 additional physicians licensed to practice medicine, an increase of 17%. Moreover, there were 672 more physicians practicing in the state in 2006 than in 2001, an increase of 21%. This growth accounted for an increase of more than 550 patient care full-time equivalent physicians (FTEs), an increase of more than 22%.

**Figure 1b. Estimated Number of Active Patient Care Physicians in New Mexico by Professional Activity, 2006**

All other tabulations and descriptions presented in this report are based on the active patient care physician supply in New Mexico in 2006. This group includes 3,858 physicians licensed in New Mexico who reported patient care activity within the boundaries of the state. This group excludes the 3,338 physicians licensed in New Mexico who reported no patient care activity within the state boundaries. Comparisons with the active patient care physician supply in 2001 are included where possible.

Figure 1b provides estimates of the number of active patient care physicians licensed in New Mexico also involved in research, teaching, administration and other activities in 2006. Using the number of hours spent in each of these activities, Figure 1c provides estimates of the activity-specific FTE physicians represented by active patient care physicians in New Mexico. The figure shows clearly that research, teaching, administration and other activities were, on average, part-time endeavors for patient care physicians in the state. Nevertheless, the more than 650 FTEs devoted to these activities represented a strong commitment by physicians practicing in the state in 2006. In addition, the figure shows the growth in effort across all of the activities between 2001 and 2006.

**Figure 1c. Activity-Specific FTEs of Active Patient Care Physicians in New Mexico, 2001 and 2006**

<b>TOTAL (2001)</b>	<b>2,644</b>	<b>542</b>	<b>3,186</b>	<b>100.0%</b>	<b>17.0%</b>	<b>2,533.5</b>		
<b>Change 2001-2006</b>	<b>609 (23.0%)</b>	<b>63 (11.6%)</b>	<b>672 (21.1%)</b>			<b>566.8 (22.4%)</b>		

Note: FTE counts are calculated by hours worked per week/40, capped at 1.0 for a specific physician.  
Part-time patient care practice is defined as working fewer than 20 hours per week in patient care.  
Other includes locum tenens physicians. Other was not a category for 2001 data.

The estimated numbers of full-time and part-time active patient care physicians in New Mexico in 2006 were 3,253 and 605, respectively. Full-time physicians grew at a greater rate (23.0%) than part-time physicians (11.6%) between 2001 and 2006. Slightly more than half of the active patient care physicians in the state were located in Bernalillo County. Estimated counts for each of the 33 counties in the state as well as change in the number of active patient care physicians are provided in Table 1.

## Physician Demographics

Active patient care physicians in New Mexico were predominantly male (70%) in 2006. Figure 2 shows the racial/ethnic composition of active patient care physicians in the state. The majority (77%) of physicians were White. Hispanic/Latino physicians made up the second most numerous group, representing about 11% of active patient care physicians. The remaining groups (American Indians/Alaska Natives; Asians and Pacific Islanders; African-Americans; Multiple race/ethnicities; and Others) made up about 12% of the active patient care physician workforce in 2006. The representation of underrepresented minorities varied considerably by specialty (Table 2a). Physical medicine and rehabilitation, Geriatrics, and Pediatrics had the greatest representation of underrepresented minorities. A group of specialties, including Allergy and Immunology; Endocrinology, Diabetes and Metabolism; Gastroenterology; Rheumatology; and Thoracic Surgery, had no representation of underrepresented minorities.

**Figure 2. Gender and Race/Ethnicity of Active Patient Care Physicians in New Mexico, 2001 and 2006**

Note: Race/ethnicity categories in 2001 and 2006 were not the same and are not directly comparable.

Reflecting the growing numbers of women entering the medical profession, female physicians were significantly younger than male counterparts in 2006, with a median age of 49 years compared to 55 years among males. The median age of active patient care physicians practicing in New Mexico was 53 years. The differences in age were also reflected in the age distributions of men and women shown in Figure 3, with proportionally more women in the younger age groups. For example, while women made up 12% of the physicians age 60 and older, they were 44% of the physicians age 45 and younger.

**Figure 3. Gender of Active Patient Care Physicians in New Mexico by Age, 2006**

### Medical Education and Training

New Mexico imports the majority of its patient care physicians from outside the state (i.e., more than 75% of the patient care physicians in New Mexico were trained or went to medical school outside the state). The proportion having attended medical school in New Mexico was 19% of the total. Fifteen percent of active patient care physicians in New Mexico were International Medical Graduates (IMGs), that is, they graduated from a medical school in a foreign country other than Canada. Figures 4a and 4b summarize these data by age, along with information on the location of active patient care physicians' residency in high school and principal specialty graduate medical training. There were significant variations in the proportions of IMGs by specialty, with Gastroenterology, Nephrology, and Thoracic Surgery at 50% or greater. A group of specialties, including Allergy and Immunology, Dermatology, Geriatrics, and Plastic Surgery had no IMGs (Table 2a). Table 2b shows the proportions of active patient care physicians who attended medical school in New Mexico and who completed graduated medical training in their principal specialty in New Mexico.

**Figure 4a. Location of Education of Active Patient Care Physicians in New Mexico, 2001 and 2006**

**Figure 4b. Percentage of International Medical Graduates Among Active Patient Care Physicians in New Mexico by Age, 2001 and 2006**

Virtually all of the active patient care physicians in New Mexico completed graduate medical training in their principal specialty in the United States, with 24% in New Mexico and 75% in another state in the U.S. or in Canada. Only 1% completed graduated medical training in their principal specialty in another country.

Twenty percent of active patient care physicians in New Mexico were residents of the state when they graduated from high school, about the same proportion as attended medical school in the state (19%). About 5% of the active patient care physicians in 2006 were New Mexicans who went to medical school out-of-state and then returned to practice medicine.

With regard to location of training, little has changed among active patient care physicians in New Mexico between 2001 and 2006. The trend, albeit slight, has been toward more physicians originating, graduating from medical school, or receiving specialty training in New Mexico.

## Practice Characteristics

### *Practice Setting*

Independent practice owner/operator was the most common principal practice setting among active patient care physicians in New Mexico in 2006, with slightly less than one-third (30%) of the physicians (Figure 5a). Organizationally-affiliated practice was the second most frequently reported practice setting among active patient care physicians, with 29% of physicians.

Slightly more than one-quarter (27%) of the active patient care physicians reported practicing in solo practice arrangements (Figure 5b). A similar number (26%) reported that their principal practice setting included 10 or more physicians.

**Figure 5a. Principal Practice Settings of Active Patient Care Physicians in New Mexico, 2006**

**Figure 5b. Principal Practice Size of Active Patient Care Physicians in New Mexico, 2006**

**Figure 5c. Number of Hospitals with Admitting Privileges of Active Patient Care Physicians in New Mexico, 2001 and 2006**

Figure 5c shows that more than one-quarter of active patient care physicians in New Mexico reported having no hospital admitting privileges in 2006. This figure is up from 21% in 2001. Forty-five percent reported admitting privileges at one hospital in 2006, slightly less than in 2001. Eleven percent of the active patient care physicians reported having admitting privileges at three or more hospitals in 2006.

---

### *Practice Specialty*

A larger number of patient care physicians in New Mexico practice Family Medicine than any other specialty. More than 750 active patient care physicians (20% of the total physician supply) indicated that Family Medicine was their principal specialty. Family Medicine was followed by General Internal Medicine (11%), General Pediatrics (8%), and Adult Psychiatry (7%) as the largest specialties in the state. Table 3 presents the estimated numbers and percentages of active patient care physicians in New Mexico by specialty in 2006.

More than one-third of the active patient care physicians in New Mexico were practicing in a primary care specialty in 2006. Family Medicine, General Internal Medicine, and General Pediatrics were indicated as principal specialty by 39% of the active patient care physicians in the state. Another 300 (8%) of the active patient care physicians selected one of these three specialties as their secondary specialty. Between 2001 and 2006 (data not shown), the percentage of physicians indicating primary care as their principal specialty did not change.

Two-thirds of the active patient care physicians in New Mexico reported that they were board certified by the American Board of Medical Specialties in their principal specialty (Table 3). This figure varies substantially across specialties, from 50% in Nephrology to 83% in Physical Medicine and Rehabilitation.

About one-third (34%) of the active patient care physicians reported a secondary specialty in 2006. Of these, 50% indicated that they were American Board of Medical Specialties certified in their secondary specialty. This reported board certification rate for secondary specialties increased incrementally since 2001.

### Financial Practice Characteristics

#### Payment Sources

In 2006, active patient care physicians in New Mexico reported that on average 30% of their patients have private insurance. One-quarter (25%) of their patients were Medicare recipients, up slightly from 22% in 2001. One-fifth (20%) of their patients had Medicaid as their primary source of payment, increasing from 14% in 2001.

**Table 5. Payment Sources of Active Patient Care Physicians in New Mexico, 2001 and 2006**

Payment Sources	Average Percentage of Patients Having Primary Source of Payment		
	Median (2006)	Median (2001)	Mean (2006)
Medicare	25%	22%	27%
Medicaid	20%	14%	23%
Tricare/VA/IHS	5%	6%	14%
Private Insurance	30%	N/A	32%
Self Pay	5%	8%	13%
Bad Debt/Charity Care/Other	5%	6%	12%

More than one-quarter (29%) of active patient care physicians in New Mexico reported providing uncompensated care for emergency services in 2006. Of those who provided uncompensated care for emergency services, about half (49%) provided the equivalent of \$24,000 or less in services (Figure 6a). One-fifth (21%) of the active patient care physicians reported providing \$100,000 or more in services in 2006.

**Figure 6a. Amount of Uncompensated Care Provided by Active Patient Care Physicians in New Mexico in 2006 for Emergency Services**

A larger proportion of active patient care physicians reported providing uncompensated care for non-emergency services than for emergency services in 2006 (42% compared to 29%). Of those who provided uncompensated care for non-emergency services, more than half (57%) provided the equivalent of \$24,000 or less in services (Figure 6b). Just more than one-quarter (27%) reported provided between \$25,000 and \$99,000 in services. Less than one-fifth (16%) of the active patient care physicians reported providing \$100,000 or more of these services in 2006.

**Figure 6b. Amount of Uncompensated Care Provided by Active Patient Care Physicians in New Mexico in 2006 for Non-Emergency Services**

### *Physician Income*

The median income of active patient care physicians in New Mexico was \$150,000 in 2006 (Figure 7). Median income varied by specialty, with primary care physicians (\$131,000) and psychiatrists (\$124,000) among the lowest paid. The highest paid specialty group included surgical specialties, with a median income of \$230,000. Facility based physicians were the second highest earners, with a median income of \$219,000.

### **Use of Electronic Media Resources in Practice**

The use of electronic media resources in the practice of medicine has become commonplace over the last decade. In 2006, more than two-fifths (42%) of active patient care physicians reported using an electronic health record in their medical practice (Table 6). Use of an electronic health record varied by specialty, with more than half of the facility based and internal medicine specialists reporting its use. On the other hand, slightly more than 20% of general surgeons reported using an electronic health record.

The use of electronic media resources for x-ray and imaging tasks showed similar variation among active patient care physicians in 2006, with 42% reporting using electronic media resources in this manner. Facility based and internal medicine specialists were also most likely to report using electronic media resources for x-ray and imaging tasks.

**Figure 7. Median Annual Income of Active Patient Care Physicians in New Mexico by Specialty Group, 2006**

Note: Reported income includes all sources and was not restricted to professional medical activities.

**Table 6. Use of Electronic Media by Active Patient Care Physicians in New Mexico by Specialty Group, 2006**

	Principal Specialty								Total
	Primary Care	Ob/Gyn	IM Specialties	Surgery (General)	Surgical Specialties	Facility Based	Psychiatrists	Other	
<b>Electronic Media Use</b>	1,518	197	289	133	426	369	300	625	3,858
<b>Electronic Health Record</b>	36.2%	34.4%	55.6%	21.0%	45.7%	57.1%	42.4%	44.6%	41.7%
<b>E-Prescribing</b>	24.4%	20.4%	42.2%	12.1%	26.4%	14.7%	27.1%	30.8%	25.8%
<b>E-Labs</b>	32.6%	28.4%	46.2%	29.0%	28.3%	46.7%	31.5%	40.4%	35.2%
<b>X-Ray and Imaging</b>	34.9%	48.1%	52.7%	41.4%	43.2%	53.6%	25.0%	54.6%	42.1%

The use of electronic media resources for laboratory work was less often reported among active patient care physicians in New Mexico, at slightly more than one-third (35%). Again, facility based and internal medicine specialists were also most likely to report using electronic media resources for laboratory work.

Finally, e-prescribing was reported by one-quarter of active patient care physicians in the state. The group most likely to e-prescribe were the internal medicine specialists.

## Access to Physician Services in New Mexico

### Practice Capacity

In 2006, about one-fifth (19%) of active patient care physicians in New Mexico reported that their practices were full and they could not see additional patients (Figure 8a). Moreover, three-fifths (59%) of the active patient care physicians reported that their practices were nearly full. Sixteen percent reported that their practices were far from full and could see many additional patients. Compared to practice capacity in 2001, physician practices in 2006 had greater capacity to see additional patients.

**Figure 8a. Practice Capacity of Active Patient Care Physicians in New Mexico, 2001 and 2006**

Practice capacity varied by specialty (Figure 8b). Primary care physicians were most likely to report that their practices were full, with 27% indicating that was the case. Obstetricians/ gynecologists were the least likely to report that their practices were full, with only about 8% indicating that they could not see additional patients. With the exception of primary care physicians, physicians across all specialty groups reported increases in practice capacity in 2006 compared to 2001. In 2006, slightly more primary care physicians reported full practices than in 2001.

**Figure 8b. Practice Capacity of Active Patient Care Physicians in New Mexico by Specialty Group, 2001 and 2006**

### *Referral Difficulties*

While reported capacity to see additional patients showed signs of improvement, active patient care physicians did report that certain specialties were more difficult to refer patients to than others (Table 7). More than one-quarter (29%) of active patient care physicians reported difficulties referring patients to dermatologists. Almost one-quarter (24%) reported difficulties referring patients to adult psychiatrists. A similar percentage (23%) reported difficulties referring patients to neurologists. Compared to 2001, referral difficulties were greater in 2006 for most specialties. Exceptions included referrals to family practitioners and otolaryngologists.

**Table 7. Difficulty Referring Patients to Other Physicians Among Active Patient Care Physicians in New Mexico, 2001 and 2006**

### Near Future Practice Plans

Physician separation from the workforce is an important issue for policy makers and planners. About 3% of the active patient care physicians in New Mexico in 2006 reported that they had plans to retire from patient care within the next 12 months (Table 8). Fewer than one in ten (8%) reported plans to significantly reduce their patient care hours in the next 12 months. Compared to 2001, fewer physicians reported each of these plans. Moreover, only 6% of the active patient care physicians in 2006 reported plans to move their practices out of New Mexico. This compares favorably to the 12% who reported plans to leave the state in 2001. In general, fewer physicians were planning any changes in 2006 than in 2001 (18% compared to 27%).

**Table 8. Practice Plans Over the Next 12 Months for Active Patient Care Physicians in New Mexico in 2001 and 2006**

	Principal Specialty								Total (2006)	Total (2001)
	Primary Care	Ob/Gyn	IM Specialties	Surgery (General)	Surgical Specialties	Facility Based	Psychia- trists	Other		
<b>Plans Next 12 Months</b>	1,518	197	289	133	426	369	300	625	3,858	3,186
<b>Retire from patient care</b>	2.0%	3.0%	2.4%	3.0%	6.0%	3.0%	2.6%	1.9%	2.8%	3.5%
<b>Significantly reduce patient care hours</b>	7.1%	6.6%	9.6%	6.6%	8.9%	11.5%	7.3%	8.9%	8.2%	9.1%
<b>Move practice to another location in NM</b>	4.1%	3.3%	0.0%	4.7%	2.7%	1.8%	1.4%	4.1%	3.2%	2.9%
<b>Move practice out of NM</b>	4.7%	6.5%	6.9%	4.9%	4.1%	10.3%	8.8%	3.1%	5.5%	11.3%
<b>None of the above</b>	83.7%	83.8%	81.0%	83.7%	78.8%	76.2%	81.9%	83.9%	82.1%	73.2%
<b>Missing</b>	3.3%	0.0%	4.5%	4.6%	4.6%	0.5%	2.7%	3.0%	3.1%	12.7%

### Health Professional Recruitment

Many (64%) active patient care physicians in New Mexico in 2006 reported that it was very difficult to recruit physicians for employment (Figure 9). More active patient care physicians reported that recruiting physicians was very difficult than reported difficulty in recruiting other health professionals (e.g., registered nurses, nurse practitioners, physician’s assistants, and others). Compared to 2001, however, fewer active patient care physicians in 2006 reported that it was very difficult to recruit physicians as well as other health professionals.

### Medical Liability Insurance Premium Thresholds

One concern of physicians is the premiums they pay for the medical liability insurance coverage. For active patient care physicians in New Mexico, liability premium increases were reported to be associated with the consideration of specific changes in their practices (Table 9). Fourteen percent of active patient care physicians reported considering reducing patient care hours. Nearly one-quarter (24%) reported considering retiring from patient care. Slightly more than one-quarter reported considering moving their practice out of state. Of those who reported considering these different courses of action, the median increase reported to stimulate the consideration was 20% for moving practices out of state and reducing patient care hours and 25% for retiring from patient care.

**Figure 9. Difficulty Recruiting Health Professionals Among Active Patient Care Physicians in New Mexico, 2001 and 2006**

**Table 9. Medical Liability Insurance Premium Thresholds Among Active Patient Care Physicians in New Mexico, 2006**

Measure Considered	Percentage of physicians who reported considering the measure:	Average level of increase at which physicians would consider:		Percentage of physicians who would consider measure at any level of increase:
	Considered Measure	Median Increase	Mean Increase	Any Increase
Retire from Patient Care	24.2%	25.0%	44.3%	1.5%
Significantly Reduce Patient Care Hours	14.0%	20.0%	36.7%	0.8%
Move Practice Out of State	27.2%	20.0%	38.5%	2.2%

**Table 10. Medicare Compensation Change Thresholds Among Active Patient Care Physicians in New Mexico, 2006**

Measure Considered	Percentage of physicians who reported considering the measure:	Average level of increase at which physicians would consider:		Percentage of physicians who would consider measure at any level of increase:
	Considered Measure	Median Decrease	Mean Decrease	Any Decrease
Retire from Patient Care	13.2%	10.0%	13.1%	2.2%
Closing Practice to New Medicare Patients	23.1%	10.0%	11.0%	4.7%
Closing Practice to All Medicare Patients	18.7%	10.0%	10.3%	4.1%
Significantly Reduce Patient Care Hours	9.5%	10.0%	16.7%	1.4%
Move Practice Out of State	15.1%	10.0%	12.8%	3.1%

*Medicare Reimbursement Change Thresholds*

Another important concern of physicians is potential changes to Medicare reimbursement rates for the services they provide. For active patient care physicians in New Mexico, Medicare reimbursement decreases were reported to be associated with the consideration of specific changes in their practices (Table 10). Slightly less than one-quarter (23%) of active patient care physicians reported considering closing their practices to new Medicare patients. Slightly less than one-fifth (19%) reported considering closing their practice to all Medicare patients. Ten percent reported considering reducing their patient care hours. Finally, 13% reported that they would consider retiring from patient care. Of those who reported considering these different courses of action, the median decrease reported to stimulate the consideration was 10%. About 5% of the active patient care physicians in New Mexico reported that they would consider closing their practice to new Medicare patients as a result of any decrease in reimbursement.

**Appendix A: 2007 New Mexico Physician Survey Instrument**

**5 PRACTICE SPECIALTY(IES) IN WHICH YOU SPEND MOST OF YOUR PROFESSIONAL TIME**

Mark ONE primary and, if applicable, ONE secondary specialty.

	Primary Specialty	Secondary Specialty
Allergy and Immunology	<input type="checkbox"/>	<input type="checkbox"/>
Anesthesiology	<input type="checkbox"/>	<input type="checkbox"/>
Dermatology	<input type="checkbox"/>	<input type="checkbox"/>
Emergency Medicine	<input type="checkbox"/>	<input type="checkbox"/>
Family Practice	<input type="checkbox"/>	<input type="checkbox"/>
General Practice	<input type="checkbox"/>	<input type="checkbox"/>
Internal Medicine		
General Internal Medicine	<input type="checkbox"/>	<input type="checkbox"/>
Cardiovascular Disease	<input type="checkbox"/>	<input type="checkbox"/>
Critical Care Medicine	<input type="checkbox"/>	<input type="checkbox"/>
Endocrinology and Metabolism	<input type="checkbox"/>	<input type="checkbox"/>
Gastroenterology	<input type="checkbox"/>	<input type="checkbox"/>
Geriatrics	<input type="checkbox"/>	<input type="checkbox"/>
Infectious Disease	<input type="checkbox"/>	<input type="checkbox"/>
Nephrology	<input type="checkbox"/>	<input type="checkbox"/>
Oncology/Hematology	<input type="checkbox"/>	<input type="checkbox"/>
Pulmonary Disease	<input type="checkbox"/>	<input type="checkbox"/>
Rheumatology	<input type="checkbox"/>	<input type="checkbox"/>
Other Internal Medicine Sub-specialty	<input type="checkbox"/>	<input type="checkbox"/>
Neurology	<input type="checkbox"/>	<input type="checkbox"/>
Obstetrics and Gynecology	<input type="checkbox"/>	<input type="checkbox"/>
Gynecology (Only)	<input type="checkbox"/>	<input type="checkbox"/>
Occupational Medicine	<input type="checkbox"/>	<input type="checkbox"/>
Ophthalmology	<input type="checkbox"/>	<input type="checkbox"/>
Otolaryngology	<input type="checkbox"/>	<input type="checkbox"/>
Pathology (General)	<input type="checkbox"/>	<input type="checkbox"/>
Pathology Sub-specialty	<input type="checkbox"/>	<input type="checkbox"/>
Pediatrics (General)	<input type="checkbox"/>	<input type="checkbox"/>
Pediatrics Sub-specialty	<input type="checkbox"/>	<input type="checkbox"/>
Physical Medicine and Rehabilitation	<input type="checkbox"/>	<input type="checkbox"/>
Preventive Medicine	<input type="checkbox"/>	<input type="checkbox"/>
Psychiatry - Adult	<input type="checkbox"/>	<input type="checkbox"/>
Psychiatry - Child and Adolescent	<input type="checkbox"/>	<input type="checkbox"/>
Radiology - Diagnostic	<input type="checkbox"/>	<input type="checkbox"/>
Radiology - Therapeutic	<input type="checkbox"/>	<input type="checkbox"/>
Surgery		
General Surgery	<input type="checkbox"/>	<input type="checkbox"/>
Neurological Surgery	<input type="checkbox"/>	<input type="checkbox"/>
Orthopedic Surgery	<input type="checkbox"/>	<input type="checkbox"/>
Plastic Surgery	<input type="checkbox"/>	<input type="checkbox"/>
Thoracic Surgery	<input type="checkbox"/>	<input type="checkbox"/>
Other Surgical Sub-specialty	<input type="checkbox"/>	<input type="checkbox"/>
Urology	<input type="checkbox"/>	<input type="checkbox"/>
Other, specify: _____	<input type="checkbox"/>	<input type="checkbox"/>

**6**

Percentage of your patient care time spent in your primary and secondary specialties:

Primary Specialty	Secondary Specialty
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> %	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> %
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>

Percentages should total 100%.

**7 TRAINING AND CERTIFICATION**

	Primary Specialty	Secondary Specialty
Completed Accredited Residency Program	<input type="checkbox"/>	<input type="checkbox"/>
Board Certified/Certificate of Added/Special Qualification	<input type="checkbox"/>	<input type="checkbox"/>

**8 HOSPITAL ADMITTING PRIVILEGES**

Number of hospitals in New Mexico at which you have admitting privileges:

None  
 One  
 Two  
 Three or more

**9 REIMBURSEMENT: PAYMENT SOURCES**

What percent of your patients have the following primary source of payment?

Percentages should total 100%.

**Compensated Care**

Medicare	Medicaid	TriCare/VA/IHS	Private Insurance
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> %	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> %	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> %	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> %
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>

## Appendix B: New Mexico Physician Survey Details

---

Included in this appendix are technical details related to the survey data that should be considered when using this report.

## Summary

In 2006, the New Mexico Health Policy Commission contracted with the Center for Health Workforce Studies (the Center) at the School of Public Health, University at Albany, State University of New York to conduct a follow-up survey of all physicians licensed to practice medicine in New Mexico. The collected survey data were then to be compared to data collected on physicians licensed to practice medicine in New Mexico in 2002. A total of 3,610 physicians responded to the survey for an overall response rate of 50.2%. Physicians with mailing addresses outside New Mexico responded at a slightly higher rate than those with mailing addresses within the state (54% compared to 48%).

## Methodology

### *Survey Distribution*

The New Mexico Health Policy Commission obtained a list of physicians licensed to practice medicine in the state by the New Mexico Medical Board or the New Mexico Osteopathic Examiners Board as of October 2006. With assistance from the Center, the New Mexico Health Policy Commission mailed surveys to all physicians in New Mexico from the initial list of 7,196 physicians. If a physician did not respond to the first mailing, a second survey was mailed to that physician. The two mailings were conducted between April and June 2007.

### *Survey Response*

Of the eligible 7,196 physicians, 4,394 physicians had mailing addresses in New Mexico and 2,802 physicians had mailing addresses outside the state. A total of 3,610 (50.2%) physicians returned the survey. Of these, 2,095 respondents had mailing addresses in New Mexico. The remaining 1,515 physicians had mailing addresses outside the state of New Mexico.

### *Data Weighting*

To account for survey non-response, the Center weighted the data based on mailing address county response rates. Table B-1 presents the county response rates and derived weights. County response rates were used as the basis for the weighting scheme because response rates varied statistically across counties and this information was the only a priori information available about survey respondents. The implicit concomitant assumption of this weighting scheme is that there were no other response biases at work in these data..

## Population Data

County level population data used in this report were obtained through the U.S. Census Bureau document: *Table CO-EST2006-ALLDATA - Annual County Population Estimates and Estimated Components of Change: April 1, 2000 to July 1, 2006*. <<http://www.census.gov/popest/counties/files/CO-EST2006-ALLDATA.csv>> (accessed 15 August 2007).

**Table B1. Mailing Address County Response Rates and Derived Survey Weights**

<b>Counties</b>	<b>Response Rate</b>	<b>Weight</b>
Bernalillo	44.8%	2.2335
Catron	0.0%	--
Chaves	52.4%	1.9091
Cibola	27.3%	3.6667
Colfax	47.4%	2.1111
Curry	45.8%	2.1852
De Baca	50.0%	2.0000
Dona Ana	46.9%	2.1301
Eddy	48.0%	2.0833
Grant	50.7%	1.9706
Guadalupe	66.7%	1.5000
Hidalgo	100.0%	1.0000
Lea	50.8%	1.9667
Lincoln	54.5%	1.8333
Los Alamos	54.5%	1.8333
Luna	48.1%	2.0769
Mckinley	50.0%	2.0000
Mora	100.0%	1.0000
Otero	55.9%	1.7895
Quay	37.5%	2.6667
Rio Arriba	56.0%	1.7857
Roosevelt	36.8%	2.7143
San Juan	44.9%	2.2278
San Miguel	49.2%	2.0345
Sandoval	53.7%	1.8615
Santa Fe	54.4%	1.8394
Sierra	72.7%	1.3750
Socorro	62.5%	1.6000
Taos	53.6%	1.8649
Torrance	33.3%	3.0000
Union	100.0%	1.0000
Valencia	68.2%	1.4667
<b>Outside New Mexico</b>	<b>54.1%</b>	<b>1.8495</b>

## Appendix C: Useful Definitions

---

## Primary Care

In this report, primary care is defined as a grouping of specialties which include general pediatrics, general internal medicine, family practice, and general practice.

## Underrepresented Minorities

In this report, underrepresented minorities (URMs) include Alaska Natives, American Indians, Hispanic/Latino Americans, and African-Americans. These groups are considered underrepresented in medicine in that they constitute a smaller portion of the physician population than they do in the U.S. population. Because race/ethnicity data were not collected at a more detailed level, the definition employed in this report is broader than the generally accepted definition. The generally accepted definition includes African-Americans, Mexican Americans, American Indians, Alaska Natives, and mainland Puerto Ricans.

For more information, please visit the Association of American Medical Colleges Web site: <<http://www.aamc.org/>>.

## Full-time Equivalents

In order to create a standard measure of supply, physicians were assigned full-time equivalent (FTE) values based on the number of hours they reported spending in professional activities per week. The FTE standard employed was 40 hours per week. For those physicians who reported spending 40 hours per week or more, a value of 1.0 was assigned for that particular activity; i.e., the maximum FTE value for any particular professional activity for any particular physician was 1.0. Separate FTEs were computed for each activity a particular physician reported.

This method of calculating FTEs was used because it closely matches the federal standard for FTE calculation in the designation of HPSAs. Thus, the calculated FTEs can be used in determining if geographic areas fall below the HPSA qualifying population-to-provider ratios.
