

SUNY Contributions to New York's Physician Population

Highlights

- Nearly 1 in 5 of New York physicians is a graduate of a SUNY medical school and/or received graduate medical training in a SUNY-sponsored program.
- The regions with the highest percentage of physicians who are SUNY medical school graduates and/or received graduate medical training at SUNY-sponsored programs are those where SUNY medical schools/hospitals are located.
- Urban counties^a outside of New York City have a higher percentage of physicians who are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored programs than rural counties or New York City.
- In 6 counties more than 30% of the physicians are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored programs.

Background

State University of New York (SUNY) medical schools are an important producer of physicians in New York State. Between 2010 and 2013 the percentage of all medical degrees awarded by SUNY medical schools increased from 33% to 35%. Moreover, every SUNY medical school awards more medical degrees on average annually than any other medical school in New York State.¹

^aThis definition of rural and urban is based on Eberts and Merschrod's typology as outlined in Article 2, Title 2C, Section 235 of the New York State Public Health Law. See Eberts PR, Merschrod K. Socioeconomic Trends in New York State, 1950-2000. 3rd ed. Albany, NY: New York State Legislative Commission on Rural Resources; 2004.

SUNY is also an important sponsor of graduate medical training. The 4 SUNY medical schools sponsor a total of 203 residency/fellowship programs at 14 different locations. In 2013 the SUNY Health Science Center at Brooklyn sponsored programs that trained 999 residents, the University at Buffalo School of Medicine sponsored programs that trained 718 residents/fellows, SUNY at Stony Brook sponsored programs that trained 519 residents/fellows, and SUNY Upstate Medical University sponsored programs that trained 493 residents/fellows.²

Findings

Nearly 1 in 5 of New York physicians is a graduate of a SUNY medical school and/or received graduate medical training in a SUNY-sponsored program.

Eighteen percent of New York physicians are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored programs. Eleven percent of physicians are SUNY medical school graduates who received graduate medical training elsewhere. Ten percent of physicians received graduate medical training in a SUNY-sponsored program but attended medical school elsewhere.

The regions with the highest percentage of physicians who are SUNY medical school graduates and/or received graduate medical training at SUNY-sponsored programs are those where SUNY medical schools/hospitals are located.

The Central New York, Western New York, and Long Island regions have the highest percentage of physicians who are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored programs (54%, 31%, and 27%, respectively) (Figure 2). The Capital District and Hudson Valley regions have the lowest percentage (12% each). The Central New York and Western New York regions have the highest percentage of physicians who are SUNY medical school graduates but did not receive graduate medical training at a SUNY-sponsored program (26% and 27%, respectively). The New York City and Hudson Valley regions have the lowest percentage (8% and 9%, respectively).

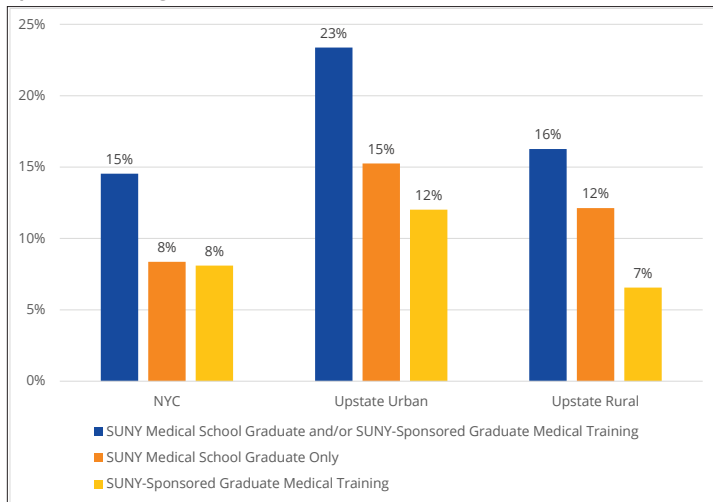

Figure 2. Percentage of Physicians Who Are SUNY Medical School Graduates and/or Received Graduate Medical Training in SUNY-Sponsored Programs by Region, 2015³

Urban counties outside of New York City have a higher percentage of physicians who are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored programs than rural counties or New York City.

New York City has an overall lower percentage of physicians who are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored programs than the rest of the state. Outside of New York City, there are differences between urban and rural counties. Urban counties outside of New York City had a higher percentage of physicians who are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored programs than rural counties (23% vs 16%, respectively), a higher percentage of physicians who are SUNY medical school graduates (15% vs 12%, respectively), and a higher percentage of physicians who received graduate medical training in a SUNY-sponsored program (12% vs. 7%, respectively) (Figure 3).

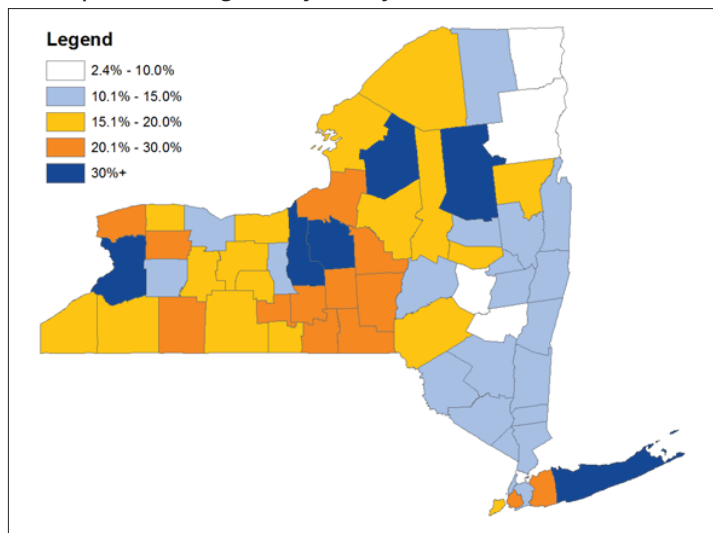

Figure 3. Percent of Physicians Who Are SUNY Medical School Graduates and/or Received Graduate Medical Training in SUNY-Sponsored Programs, 2015³

In 6 counties more than 30% of the physicians are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored programs.

More than 30% of physicians in Cayuga, Erie, Hamilton, Lewis, Onondaga, and Suffolk Counties are SUNY medical school graduates and/or received graduate medical training in SUNY-sponsored hospitals (Figure 4).

^a Includes physicians practicing or living in New York State.

This research was conducted at the Center for Health Workforce Studies (CHWS) by Erin Roberts and Robert Martiniano. Support for this analysis was provided by the State University of New York.

CHWS, established in 1996, is based at the School of Public Health, University at Albany, State University of New York (SUNY). The mission of CHWS is to provide timely, accurate data and conduct policy relevant research about the health workforce. The research conducted by CHWS supports and promotes health workforce planning and policymaking at local, regional, state, and national levels.
