Center for Health Workforce Studies

- The Center for Health Workforce Studies (CHWS) was established in 1996
- Mission: To provide timely, accurate information and conduct policy-relevant research about the health workforce
- Goal: To assist health, professional, and educational organizations, policy makers, and other stakeholders to understand issues related to the supply, demand, distribution, and the use of health workers

The nurses and doctors at this hospital are miracle workers. I can't speak highly enough about the facilities, the kindness of the staff and support from everyone...even the parking attendant! I highly recommend this hospital if you are looking for a place to have your baby! ☐☐

I only go here for blood work since it is convenient. I have never, not once, had a friendly phlebotomist. I sign in, go to sit and hear "Come in". She never got up or moved her face from the computer screen. I walked in and said "hi ..."

Background and Purpose of Study

- Understanding patients' concerns and expectations regarding hospitals is crucially important for providers and administrators to improve service quality.
- In the internet era, information required for such attempts has become more accessible and affordable, as a huge and increasing amount of unsolicited feedback is provided on crowd-sourced review websites (Google Maps, Yelp, etc.).
- The purpose of this study is to better understand patients' concerns and expectations by analyzing feedback data collected on the internet.

Data Source for Study

- A list of all hospitals in U.S. was obtained from Data.gov
 - 'Hospitals', hospital name and address
- A web crawler was created to retrieve individual ratings and comments as well as hospitals' overall ratings from Google Maps.
 - 7,496 hospitals → 6,735 can be found in Google Maps
→ 5,888 have ratings and comments

Methods

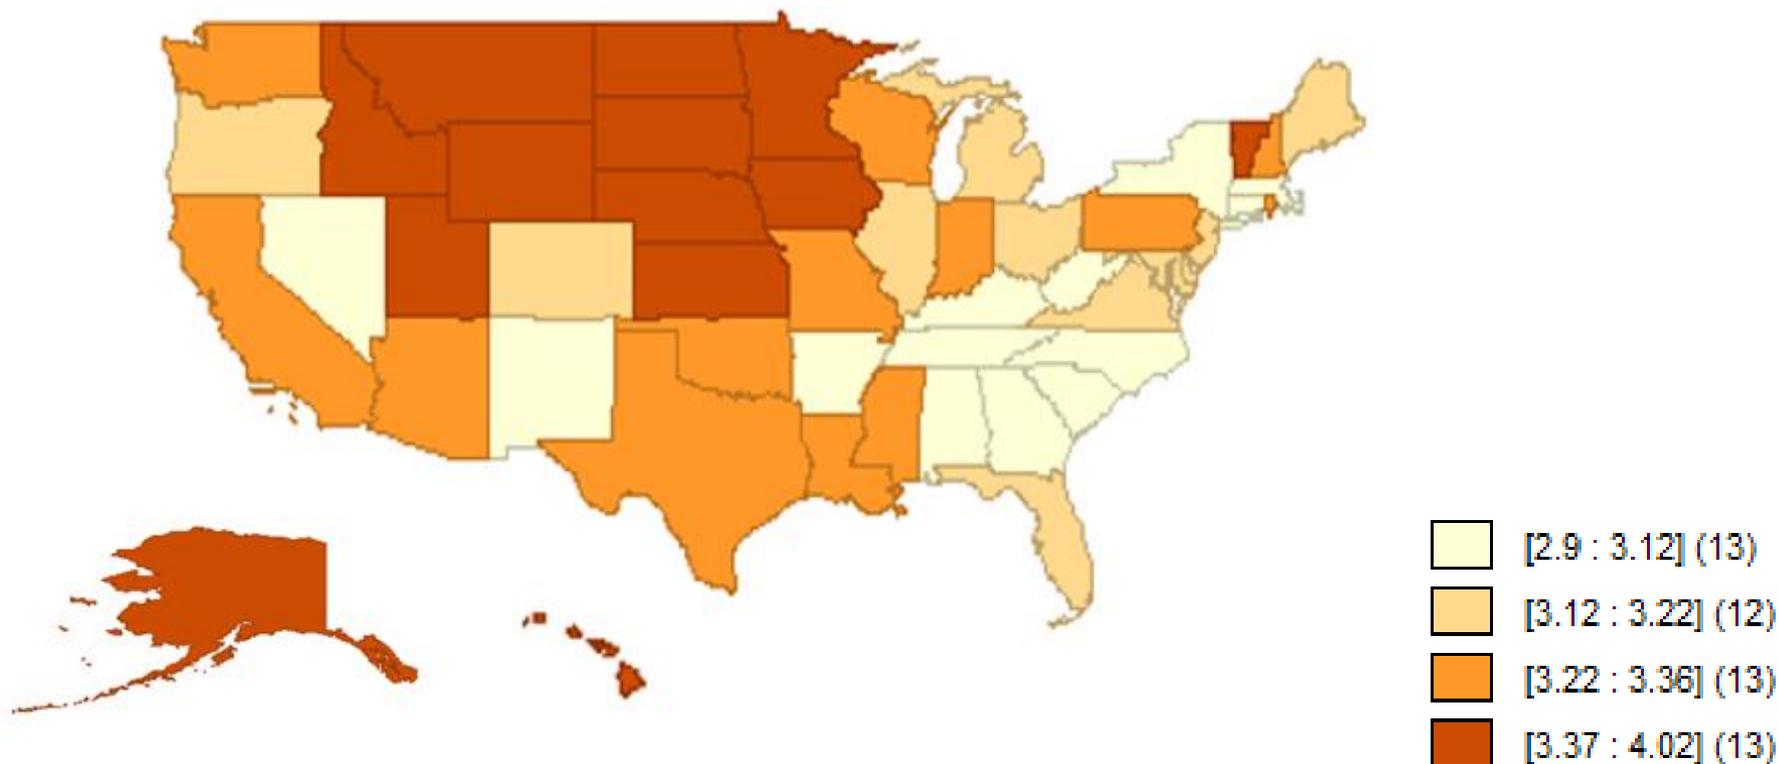

- Overall ratings:
 - Distributions of score range
 - Mean values by 50 states
- Individual ratings and comments:
 - Classify as positive, neutral and negative
 - Most frequent two-gram terms
 - Text clustering analysis

Mean, Median and Distribution of Overall Ratings of Hospitals

- Distribution of hospitals by overall rating groups
 - N=5,888, scale of 1 to 5

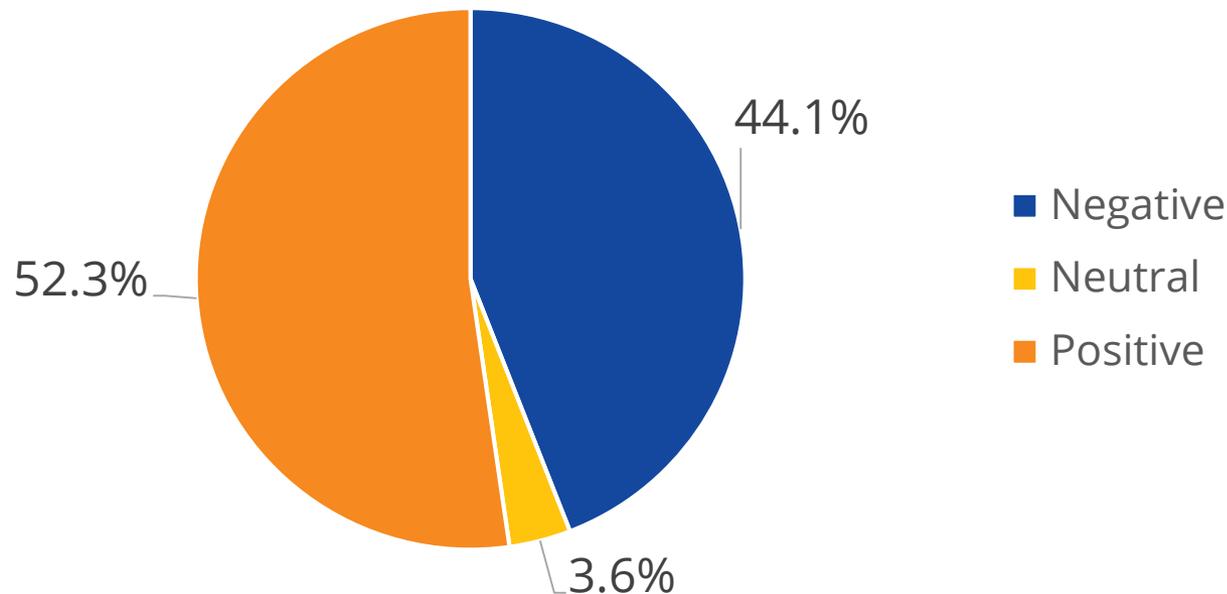

Mean value of Overall Ratings of Hospitals by 50 States

Classification of Individual Ratings and Comments

- Individual rating ≤ 2 → Negative rating and comment
- Individual rating = 3 → Neutral rating and comment
- Individual rating ≥ 4 → Positive rating and comment

N=26,141

Data Cleaning for Text Analysis on Comments

- Remove punctuation
- Covert all letters to lower-case
- Remove stop words (the, also, to, and)
- Stemming (looks, looked, looking → look)

daughter

Key Findings and Implications: Hospital Administrators

- Most hospitals in US receive a neutral rating from their visitors on average, which varies by state and region.
- Hospital administrators may wish to improve billing and payment processes, reduce waiting times, make facilities more accessible for aged patients and improve service quality.
- Hospitals administrators may wish to make patients feel they are receiving excellent and friendly care from hospital staff.

Key Findings and Implications: Methods

- Patient feedback on crowdsourced review websites is readily available for analysis and can be informative.
- Text mining techniques can dramatically improve the efficiency of classifying patients' feedback and identifying their underlying meaning.

Limitations of Study

- Some overall ratings are based on very few users' feedback, which might lead to biased conclusions.
- Does not investigate reasons for disparities of overall ratings by state and region.
- Subjective decision on the number of clusters.
