Phone: (518) 402-0250 Web: www.chwsny.org Email: info@chwsny.org This report summarizes the results of the annual Survey of Residents Completing Training in New York conducted by the Center for Health Workforce Studies (CHWS) in the spring and summer of 2023.

DEMAND

Demand for new physicians in primary care specialties* remains strong

- Physicians in primary care specialties were less likely than physicians in other specialties to report difficulty finding a satisfactory practice position (14% vs 18%) and having to change plans due to limited opportunities (5% vs 11%)
- Physicians in primary care specialties received slightly more job offers than physicians in other specialties (mean of 3.51 vs 3.34)

IN-STATE RETENTION

Over half (53%) of new physicians planned to stay in New York to practice after completing training

- · Among those staying in New York, 91% planned to remain in the same region where they trained
- For those leaving New York, the top reasons for leaving were: to be closer to family (34%), better salary offered outside New York (15%), and cost of living in New York (9%)

UNDERSERVED AREAS

Few physicians reported plans to practice in rural areas

Only 4% of physicians completing training in New York reported plans to practice in a rural area

DIVERSITY

Gender diversity of new physicians is comparable to the US population but racial/ethnic diversity is not

- Forty-seven percent (47% compared to 48% in 2014) of new physicians were female, similar to the US population (50%)
- Fifteen percent (15% compared to 15% in 2014) of new physicians were underrepresented minorities (URMs),[‡] vs 34% of the US population[†]
- * Primary care includes: family medicine, general internal medicine, and general pediatrics.
- † US population data (% female and % URM) were obtained at https://www.census.gov/quickfacts/. Accessed March 22, 2024.
- ‡ URMs include Black/African Americans, Hispanic/Latinos, and American Indians.

PREFACE

This report summarizes the results of the Survey of Residents Completing Training in New York (Exit Survey) conducted by the Center for Health Workforce Studies (CHWS) in the spring and summer of 2023. This survey, administered annually with the cooperation and assistance of residency program directors and hospitals' graduate medical education (GME) administrators across the state, consists of questions covering the following general topical areas: residents' demographic and background characteristics, residents' post-graduation plans, characteristics of post-graduation employment (for residents with confirmed practice plans), residents' experiences in searching for a job, and their impressions of the physician job market (for residents who had searched for a job).

The primary goal of the Exit Survey is to assist the medical education community and policy makers in New York in their efforts to train physicians to meet the needs of the state and the nation. To achieve this goal, CHWS provides residency programs, teaching hospitals, and the medical education community with information about the demand for new physicians and the outcomes of residency training by specialty based on the results of the survey.

This report was prepared by CHWS staff Jinman Pang, David Armstrong, and Sage Shirey. Funding for the 2023 Exit Survey and analysis was provided by the New York State Department of Health.

Established in 1996, CHWS is an academic research center, based at the School of Public Health, University at Albany, State University of New York (SUNY). The mission of CHWS is to provide timely, accurate information and conduct policy-relevant research about the health workforce. The research conducted by CHWS supports and promotes health workforce planning and policymaking at local, regional, state, and national levels. Today, CHWS is a national leader in the field of health workforce studies.

The views expressed in this report are those of CHWS and do not necessarily represent positions or policies of the School of Public Health, University at Albany, SUNY, or the New York State Department of Health.

EXECUTIVE SUMMARY

BACKGROUND

The Center for Health Workforce Studies (CHWS) conducts an annual survey of all physicians completing a residency or fellowship training program in New York (the Exit Survey). The goal is to provide the medical education community with useful information about the outcomes of training and the demand for new physicians. The survey instrument (Appendix B) was developed by CHWS in consultation with the state's teaching hospitals and other key stakeholders.

Each year in the spring, CHWS distributes the Exit Survey to graduate medical education (GME) administrators at teaching hospitals in New York. The survey is then forwarded to individual programs where graduating residents and fellows are asked to complete a questionnaire in the weeks prior to finishing their program. Completed questionnaires are returned to CHWS for data entry and analysis. In 2023, with the participation of teaching hospitals, a total of 2,000 of the estimated 5,206 physicians finishing a residency or fellowship training program completed the Exit Survey (38% response rate). Over the 23 years the survey has been conducted (1998-2003, 2005, 2007-2019, 2021-2023), 67,367 of 115,593 graduates have completed the survey (58% cumulative response rate).

A summary of the 2023 survey results is presented in this report. Many of the questions on the Exit Survey are designed to assess the demand for physicians in general and by specialty. While the experiences of graduates of training programs in New York may not reflect the experiences of all graduates around the country, they are illustrative of the marketplace for new physicians. By conducting the survey annually, it is possible to observe trends in the marketplace, which can be useful in projecting future demand.

KEY FINDINGS

Overall, the job market for physicians completing training in New York in 2023 was strong.

Based on the responses to several questions used to measure demand, the opportunities for New York's graduating physicians in 2023 were comparable to those in 2022.

- Ninety-five percent (95%) of respondents who had actively searched for a practice position had received at least 1 job offer at the time they completed the survey.
- Seventeen percent (17%) of respondents reported difficulty finding a satisfactory practice position; 16% of them contributed their difficulty to an overall lack of jobs and 31% contributed their difficulty to a lack of jobs in desired locations.
- Only 10% of respondents indicated that they had to change plans due to limited job opportunities.
- The median starting income of respondents was \$302,600, a 7% increase from 2022.

Demand for physicians in primary care specialties* was stronger than the demand for physicians in other specialties according to most indicators.

- Physicians in primary care specialties were less likely than physicians in other specialties to report difficulty finding a satisfactory practice position (14% vs 18%) and having to change plans due to limited opportunities (5% vs 11%).
- Physicians in primary care specialties had a more favorable view of the regional job market (1.53 vs 1.20) and national job market (1.77 vs 1.63) (based on a scale of -2.00, indicating "No Jobs" to +2.00, indicating "Many Jobs").
- Physicians in primary care specialties received slightly more job offers than physicians in other specialties (mean of 3.51 vs 3.34).

There were important differences in the demand for individual specialties.

- Based on a variety of indicators[†] the demand for physicians in anesthesiology, gastroenterology, child and adolescent psychiatry, obstetrics/gynecology, adult psychiatry, and family medicine was strongest.
- Physicians in emergency medicine, general surgery, pathology, and physical medicine and rehabilitation experienced the weakest demand relative to other specialties.

^{*} In this report primary care includes the following specialties: family medicine, general internal medicine, and general pediatrics. Non-primary care includes all other specialties. See Appendix A for a complete taxonomy of specialties.

[†] The indicators included having difficulty finding a job, having to change plans due to limited practice opportunities, mean number of job offers, view of the regional market, view of the national job market, and trends in median starting income.

Gender diversity of new physicians is comparable to the US population but racial/ethnic diversity is not.

- Forty-seven percent (47%) of new physicians were female, similar to the US population (50%).
- Fifteen percent (15%) of physicians completing training in New York were underrepresented minorities (URMs).§ In comparison, 34% of the US population are URMs.§

Fifty-three percent (53%) of the physicians completing training in New York planned to enter patient care/clinical practice. Thirty-nine percent (39%) of respondents reported plans to subspecialize or pursue additional training.

More than half (53%) of new physicians planned to stay in New York to practice after completing training.

• When respondents who had plans to leave New York were asked about the main reason for leaving, the most common reasons reported were proximity to family (34%), better salary offered outside New York (15%), and cost of living in New York (9%).

Few physicians reported plans to practice in underserved areas.

- Fourteen percent (14%) of respondents indicated that they would be practicing in a federally designated Health Professional Shortage Area (HPSA).
- Only 4% of physicians completing training in New York reported plans to practice in a rural area.

[‡] US population data (% female and % URM) were obtained at https://www.census.gov/quickfacts/. Accessed March 22, 2024.

[§] URMs include Black/African Americans, Hispanic/Latinos, and American Indians.

GENERAL RESULTS

Characteristics of 2023 Respondents

- Forty-seven (47%) of survey respondents were women.
 - The specialties with the most women were: endocrinology and metabolism (88%), obstetrics/gynecology (85%), general pediatrics (72%), and infectious disease (67%).
- Underrepresented minorities (URMs) comprised 15% of all respondents.
 - The specialties with the most URMs were: general pediatrics (25%), pulmonary disease (23%), family medicine (22%), and obstetrics/gynecology (22%).
- Twenty-eight percent (28%) of respondents were New Yorkers.
 - Forty-nine percent (49%) of respondents were from other states and 21% were from other countries (not including Canada).
- Thirty-one percent (31%) of respondents were IMGs.
 - The specialties with the highest concentrations of IMGs were: critical care medicine (65%), pathology (65%), cardiology (61%), and general internal medicine (55%).
 - The specialties with the fewest IMGs included anesthesiology (5%), dermatology (5%), ophthalmology (6%), orthopedics (7%), and emergency medicine (7%).
- Thirteen percent (13%) of respondents were IMGs on temporary visas.
 - The specialties with the highest concentrations of IMGs on temporary visas were: infectious disease (43%), cardiology (39%), critical care medicine (35%), and general internal medicine (28%).
 - Ophthalmology (0%), child and adolescent psychiatry (0%), and anesthesiology (0%) had no temporary visa holders.
- The median education debt of respondents (US citizens only) was \$178,600.
 - Specialties with the highest median education debt were family medicine (\$272,250), general surgery (\$233,500), and general pediatrics (\$229,200).
 - Cardiology (\$0), child and adolescent psychiatry (\$0), endocrinology and metabolism (\$4,000), and pathology (\$28,850) were the specialties with the lowest education debt.

II New Yorkers are defined as individuals who graduated from a high school in New York.

Planned Activities After Completion of Current Training Program

- Fifty-three percent (53%) of all respondents reported plans to enter patient care practice following completion of their current training program.
 - Of these, 94% had confirmed practice plans (ie, they had accepted an offer for a job/ practice position) when they completed the survey.
- Thirty-nine percent (39%) of respondents reported plans to subspecialize or pursue further training.
- The remainder reported plans to work as chief residents (2%), to begin a teaching/research position (1%), and to engage in other activities (2%).

Practice Plans of Respondents Entering Patient Care

- Fifty-three percent (53%) of respondents with confirmed plans reported plans to enter practice in New York.
 - The vast majority of these respondents (91%) reported confirmed plans to remain in the same region they had trained.
- In-state retention of physicians was highest in the following specialties: general surgery (88%), anesthesiology (75%), and adult psychiatry (74%).
- In-state retention of physicians was lowest in the following specialties: ophthalmology (0%), orthopedics (22%), and cardiology (30%).
- Respondents who graduated from a high school and a medical school in New York were the most likely (74%) to report confirmed plans to practice in New York after completing training.
- When respondents who had plans to leave New York to practice were asked about the main reason for leaving, the most common reasons reported were proximity to family (34%), better salary outside New York (15%), and cost of living in New York (9%).
- Seven percent (7%) of respondents indicated that they had never intended to practice in New York.
- Few respondents reported that the principal reason for practicing outside of New York was the cost of malpractice insurance in New York (0%), the cost of starting a practice in New York (0%), climate/weather in New York (1%), or taxes in New York (2%).
- Thirty-six percent (36%) of respondents reported plans to practice in inner-city locations, while only 4% were going to rural locations.
- Respondents in the following specialties were most likely to report plans to enter practice in inner city locations: hematology/oncology (59%), pathology (55%), radiology (55%), and infectious disease (50%).

- Fourteen percent (14%) of respondents reported that they would be practicing in a federally designated HPSA.
- The respondents most likely to report plans to practice in HPSAs were in the specialties of cardiology (45%), general pediatrics (44%), and critical care medicine (33%).
- Fifty-seven percent (57%) of respondents reported plans to practice in hospitals.
 - Of these respondents, 56% reported plans to practice in inpatient settings, 26% in ambulatory care settings within the hospital, and 18% in emergency departments.
- Thirty-seven (37%) of respondents reported plans to join group practices.
 - Of these respondents, 84% reported plans to join group practices as employees.

Expected Starting Income#

Differences in income between specialties can reflect dissimilarities in demand. They also reflect historical reimbursement policies for the kinds of services provided in various specialties. As such, trends in income provide a better indicator of demand than income levels at any particular point in time.

Although the expected income in the first year of practice (ie, starting income) of recent graduates is likely to be much lower than that of experienced, practicing physicians, the differences in income among new graduates across specialties are assumed to be generally consistent with the differences by specialty among practicing physicians, and thus provide some insight into the rank ordering of demand across specialties.

- Although there was some overlap in the salary distributions of primary care and non-primary care physicians, non-primary care physicians generally reported higher incomes.
- Respondents in the following specialties reported the highest median starting incomes: anesthesiology (\$446,100), orthopedics (\$435,600), and cardiology (\$423,600).
- General pediatrics had the lowest median starting income of all specialties (\$190,650).
 - Other specialties with low reported starting incomes included infectious disease (\$227,200) and endocrinology and metabolism (\$233,000).
- Most specialties experienced moderate growth in starting incomes from 2018 to 2023.
- Ophthalmology (+13%), obstetrics/gynecology (+8%), neurology (+8%), hematology/oncology (+8%), gastroenterology (+8%), and anesthesiology (+7%) experienced the strongest growth in income between 2018 and 2023.
- Physical medicine and rehabilitation (0%) was the only specialty that experienced no income growth during this time period.

[#] Expected starting income includes both reported base salary and expected incentive income as reported on the Exit Survey. While the graduates with confirmed practice plans for salaried positions were likely to know their base salary with certainty, those entering solo practice and those expecting incentive income were likely to be less accurate.

Expected Weekly Patient Care/Clinical Practice Hours

- Overall, respondents expected to spend an average of 43.3 hours per week in patient care/ clinical practice activities.
- Respondents in the following specialties reported expectations to work the highest patient care/ clinical practice hours per week: general surgery (53.5 hours), anesthesiology (53.0 hours), and cardiology (51.7 hours).
- Respondents in the following specialties reported expectations to work the fewest patient care/clinical practice hours per week: emergency medicine (34.5 hours), child and adolescent psychiatry (35.8 hours), and pediatric subspecialties (36.6 hours).

Experiences Searching for a Practice Position

The Exit Survey includes several questions related to experiences searching for a practice position for any respondent who reported confirmed plans to enter or who considered entering patient care/clinical practice. Responses from IMGs on temporary visas have been excluded because they have more restrictions on where they can practice compared to other physicians. Respondents who indicated they had not yet actively searched for a position were also excluded.

- Seventeen percent (17%) of respondents reported difficulty finding satisfactory positions.
- The most often cited main reason for difficulty finding a satisfactory practice position was lack of jobs in desired locations (31%) and inadequate salary/compensation offered (24%), followed by lack of jobs in desired practice setting (20%) and an overall lack of jobs (16%).
- The specialties with the highest percentage of respondents having difficulty finding a satisfactory practice position in 2023 were: critical care medicine (40%), ophthalmology (40%), physical medicine and rehabilitation (39%), and general surgery (36%).
- The specialties with the lowest percentage of respondents having difficulty finding a satisfactory practice position in 2023 were: endocrinology and metabolism (0%), anesthesiology (5%), adult psychiatry (7%), and emergency medicine (9%).
- Ten percent (10%) of respondents reported having to change their plans due to limited practice opportunities in 2023.
- The specialties with the highest percentage of respondents who had to change plans due to limited practice opportunities in 2023 were: pathology (21%), critical care medicine (20%), general surgery (20%), ophthalmology (20%), and child and adolescent psychiatry (19%).
- The specialties with the lowest percentage of respondents who had to change plans due to limited practice opportunities in 2023 were: dermatology (0%), infectious disease (0%), anesthesiology (3%), adult psychiatry (4%), and family medicine (4%).

- The average number of job offers received by respondents was 3.4.
 - Respondents in the following specialties received the most job offers: anesthesiology (5.04), obstetrics/gynecology (4.56), and child and adolescent psychiatry (4.45).
 - Respondents in the following specialties received the fewest job offers: physical medicine and rehabilitation (1.92), pathology (2.26), and critical care medicine (2.67).

Assessment of the Job Market for New Physicians

- Overall, respondents viewed the regional job market positively, with an average score of +1.26 (on a scale of -2.00, indicating "No Jobs" to +2.00, indicating "Many Jobs").
 - Respondents in the following specialties received the most positive views of the regional job market: child and adolescent psychiatry (+2.00), anesthesiology (+1.91), and adult psychiatry (+1.78).
 - Respondents in the following specialties had the least positive views of the regional job market: pathology (+0.39), pediatric subspecialties (+0.56), orthopedics (+0.56), and physical medicine and rehabilitation (+0.77).
- Respondents assessed the national job market (+1.66) more positively than the regional job market (+1.26).
 - Respondents in the following specialties reported the most positive views of the national
 job market: child and adolescent psychiatry (+2.00), infectious disease (+2.00), endocrinology and metabolism (+2.00), anesthesiology (+1.96), adult psychiatry (+1.96), and
 hematology/oncology (+1.94).
 - Respondents in the following specialties reported the least positive views of the national job market: pathology (+1.00), physical medicine and rehabilitation (+1.23), and orthopedics (+1.36).
- Demand for physicians in primary care specialties was comparable to the demand for physicians in other specialties.
 - Physicians in primary care specialties were somewhat less likely than physicians in other specialties to report difficulty finding satisfactory practice positions (14% and 18%, respectively) and having to change plans due to limited practice opportunities (5% and 11%, respectively).
 - Physicians in primary care specialties received a similar number of job offers to physicians in other specialties (mean of 3.51 and 3.34 respectively).
 - Physicians in primary care specialties had a more positive view than physicians in other specialties of the regional job market (average score of 1.53 vs 1.20, respectively) and national job market (1.77 vs 1.63).

- The average annual increase in median starting income from 2018 to 2023 was 4% for primary care physicians and 5% for other physicians.
- Based on an aggregation of all demand indicators from the last 4 years of the survey, demand for physicians was strongest in the following specialties: anesthesiology, gastroenterology, child and adolescent psychiatry, obstetrics/gynecology, adult psychiatry, and family medicine.
- Demand for physicians was weakest in the following specialties: emergency medicine, general surgery, pathology, and physical medicine and rehabilitation.

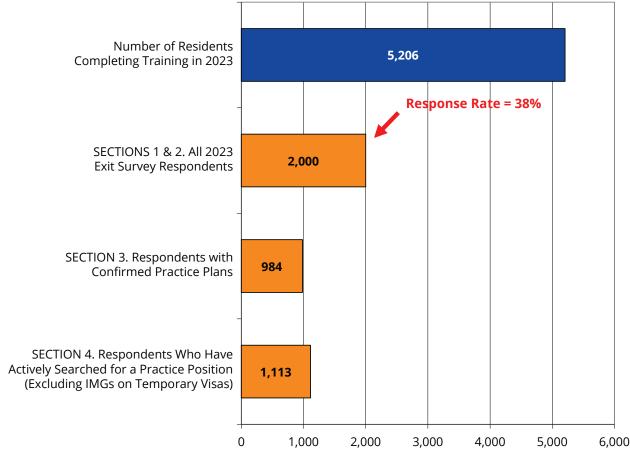

TECHNICAL REPORT

SUBGROUPS OF RESPONDENTS

Figure 1 illustrates the subgroups of respondents considered in each section of this report. The survey was completed by 2,000 of the estimated 5,206 residents who completed training in 2023 (38% response rate). Sections 1 and 2 of this report describe the characteristics of all survey respondents and outlines of their planned activities following completion of their current training programs. Section 3 describes respondents who are entering patient care/clinical practice and had confirmed practice plans (ie, they had accepted a job offer or will be self-employed) at the time they completed the survey. Section 4 summarizes the responses to several questions used to measure demand and relate respondents' experiences searching for practice positions. This section excludes respondents who had not yet searched for a practice position and international medical graduates (IMGs) on temporary visas as they have more restrictions on where they can practice compared to other physicians. Appendix A presents response rates by specialty and region and illustrates how specialties are grouped in this report. Appendix B contains the 2023 Exit Survey instrument.

SECTION 1: CHARACTERISTICS OF ALL RESPONDENTS

1.1 Background Characteristics

Table 1.1 describes the characteristics of all 2023 Exit Survey respondents. This information is presented because these characteristics are known to be associated with several outcomes of interest. For example, IMGs were much more likely to report difficulty finding a satisfactory practice position. Thus, the proportion of IMGs in each specialty is important to consider when comparing outcomes of interest across specialties.

- Forty-seven percent (47%) of survey respondents were women.
 - The specialties with the most women were: endocrinology and metabolism (88%), obstetrics/gynecology (85%), general pediatrics (72%), and infectious disease (67%).
 - The specialties with the fewest women were: pain management (7%), orthopedics (18%), and cardiology (19%).
- Underrepresented minorities (URMs)* comprised 15% of respondents in 2023.
 - The specialties with the most URMs were: general pediatrics (25%), pulmonary disease (23%), family medicine (22%), and obstetrics/gynecology (22%).
 - The specialties with the fewest URMs were: endocrinology and metabolism (6%), neurology (8%), and emergency medicine (10%).
- Twenty-eight percent (28%) of respondents were New Yorkers.[†]
 - Forty-nine percent (49%) of respondents were from other states and 21% were from other countries (not including Canada).
- Thirty-one percent (31%) of 2023 respondents were IMGs.
 - The specialties with the highest concentrations of IMGs were: critical care medicine (65%), pathology (65%), cardiology (61%), and general internal medicine (55%).
 - The specialties with the fewest IMGs included: anesthesiology (5%), dermatology (5%), ophthalmology (6%), orthopedics (7%), and emergency medicine (7%).
- Thirteen percent (13%) of respondents were IMGs on temporary visas.
 - The specialties with the highest concentrations of IMGs on temporary visas were: infectious disease (43%), cardiology (39%), critical care medicine (35%), and general internal medicine (28%).
 - The specialties with the fewest temporary visa holders were: ophthalmology (0%), child and adolescent psychiatry (0%), anesthesiology (0%), emergency medicine (1%), obstetrics/gynecology (4%), and orthopedics (4%).

^{*} URMs include Blacks/African Americans, Hispanic/Latinos, and American Indians.

[†] New Yorkers are defined as individuals who graduated from a high school in New York.

^a Specialties with small numbers of respondents are not shown but are included in subgroup totals and overall total. Appendix A gives response rates for all specialties listed on the survey and shows how each specialty has been grouped in the tables presented in this report.

^b Underrepresented minority includes Black/African American, Hispanic/Latino, and American Indian.

^c Individuals who graduated high school in New York are described as New Yorkers in this report.

^d IMG = International Medical Graduate.

^eTemporary Visa Holder refers to respondents with temporary citizenship status. This includes J1 or J2 Exchange Visitors and H1, H2, or H3 Temporary Workers.

1.2 Education Debt

Table 1.2 presents descriptive statistics for respondents' education debt. Only respondents who were US citizens are included, because non-US citizens often have their medical education paid for by their home country's government. The number of respondents (N) is indicated as many specialties had small numbers of respondents. Finally, specialties are ranked in descending order (ie, 1 is highest, 25 is lowest) by both mean and median education debt.

- The median education debt of 2023 respondents was \$178,600.
 - Specialties with the highest median education debt were family medicine (\$272,250),
 general surgery (\$233,500), and general pediatrics (\$229,200).
 - The specialties with median education debt of less than \$50,000 were cardiology (\$0), child and adolescent psychiatry (\$0), endocrinology and metabolism (\$4,000), pathology (\$28,850), and dermatology (\$29,000).

FIGURE 1.5. Median Education Debt (in \$1,000s) by Specialty and Race/Ethnicity (All 2023 Exit Survey Respondents, US Citizens Only)

^a Rank based on 25 specialties, ranked in descending order (ie, highest debt ranked #1, lowest debt ranked #25).

1.3 Marital Status and Dependent Children

Figure 1.6 displays the percentage of respondents who were married and Figure 1.7 displays the percentage of respondents that have dependent children. Table 1.3 summarizes this information by specialty.

- Overall, 52% of respondents indicated that they were married, and of those who were married,
 34% were married to another physician.
 - The specialties with the most married respondents were gastroenterology (78%), orthopedics (69%), pulmonary disease (66%), and pediatric subspecialties (66%).
 - The specialties with the fewest married respondents were pain management (33%), emergency medicine (35%), and family medicine (41%).
- Twenty-five percent (25%) of respondents reported that they had dependent children.
 - The specialties with the most respondents with dependent children respondents were orthopedics (42%), hematology/oncology (40%), pulmonary disease (40%), cardiology (40%), and endocrinology and metabolism (38%).
 - The specialties with the fewest respondents with dependent children were emergency medicine (9%), family medicine (9%), ophthalmology (12%), and anesthesiology (19%).

SECTION 2: PLANNED ACTIVITES AFTER COMPLETION OF CURRENT TRAINING PROGRAM

Table 2.1 summarizes the planned primary activities of survey respondents following completion of their current training program. Respondents were given the following choices: patient care/clinical practice, subspecializing/continuing training, chief residency, teaching/research, and other. Activities varied considerably by specialty.

- Fifty-three percent (53%) of respondents reported plans to enter patient care following completion of their current training program.
 - Of these, 94% had confirmed practice plans (ie, they had accepted an offer for a job/ practice position) at the time they completed the survey.
- Thirty-nine percent (39%) of respondents reported plans to subspecialize or pursue further training.
- The remainder reported plans to: work as chief residents (2%), to begin a teaching/research position (1%), or engage in other activities (2%).
- Respondents in the following specialties most frequently reported plans to enter patient care/clinical practice: pain management (93%), critical care medicine (88%), child and adolescent psychiatry (88%), hematology/oncology (88%), and infectious disease (80%).
- Respondents in the following specialties most frequently reported plans to subspecialize or continue training: ophthalmology (79%), general surgery (68%), and neurology (64%).
- Respondents in the following specialties most frequently reported plans to take positions as chief residents: general internal medicine (7%), general pediatrics (5%), and pulmonary disease (3%).
- Respondents in the following specialties most frequently reported plans to enter teaching or research positions: gastroenterology (8%), hematology/oncology (8%), endocrinology and metabolism (7%), and infectious disease (5%).

SECTION 3: CONFIRMED PRACTICE PLANS OF RESPONDENTS ENTERING PATIENT CARE PRACTICE

This section summarizes the characteristics of the practice plans of survey respondents with confirmed plans to enter patient care/clinical practice. Respondents who indicated they were entering patient care/clinical practice were asked if they had actively searched for a job and if they had secured a position. Only those respondents who had accepted a job offer and those who would be self-employed (ie, in solo practice or a partnership) are included in this section of the report.

3.1 Practice Location

Table 3.1 displays the practice locations of respondents with confirmed practice plans. A total of 984 respondents reported confirmed practice plans. One percent (1%) of these respondents reported confirmed plans to leave the US. Physicians with plans to leave the US have been excluded from all other subsections within Section 3.

- Fifty-three percent (53%) of respondents with confirmed plans reported plans to enter practice in New York.
 - The vast majority of these respondents (91%) reported confirmed plans to remain in the same region they had trained.
- In-state retention of physicians was highest in the following specialties: general surgery (88%), anesthesiology (75%), and adult psychiatry (74%).
- In-state retention of physicians was lowest in the following specialties: ophthalmology (0%), orthopedics (22%), and cardiology (30%).
- Respondents who graduated from a high school and a medical school in New York were the most likely to report confirmed plans to practice in New York after completing training (74%).
- When respondents who had plans to leave New York to practice were asked about the main reason for leaving, the most common reasons reported were: proximity to family (34%), better salary outside New York (15%), and cost of living in New York (9%).
- Seven percent (7%) of respondents indicated that they had never intended to practice in New York.
- Few respondents reported that the principal reason for practicing outside of New York was the cost of malpractice insurance in New York (0%), the cost of starting a practice in New York (0%), climate/weather in New York (1%), or taxes in New York (2%).

^aThis subgroup (ie, respondents with confirmed practice plans) includes respondents who indicated they were entering patient care/clinical practice and had accepted an offer for a practice position.

^b This subgroup (ie, respondents leaving the US) has been excluded from all other tables within Section 3 of this report.

FIGURE 3.3. Rank of In-State Retention Rates by Specialty (for 2023 Respondents With Confirmed Practice Plans)

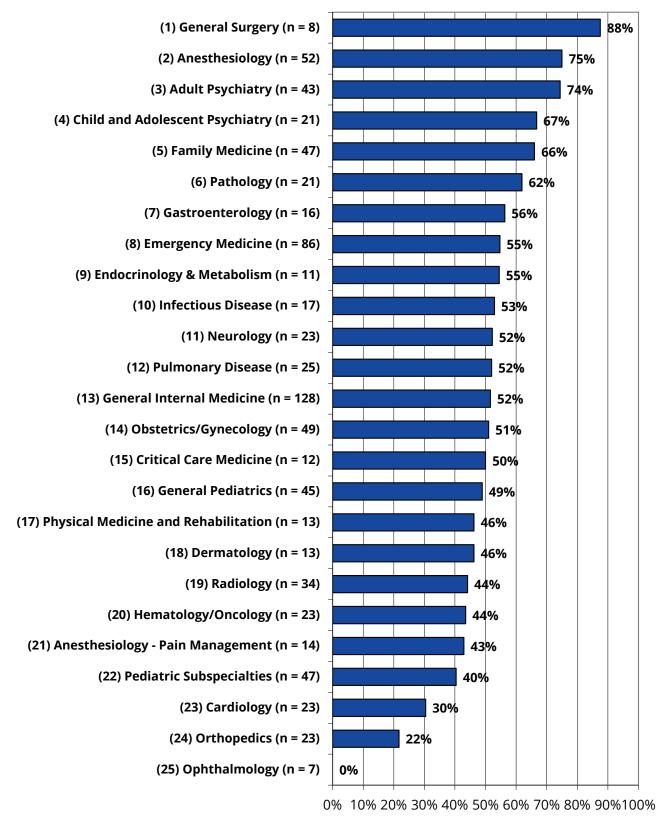

FIGURE 3.4. Percentage With Confirmed Practice Plans in New York by Location of High School, Location of Medical School, and Citizenship Status (for 2023 Respondents With Confirmed Practice Plans)

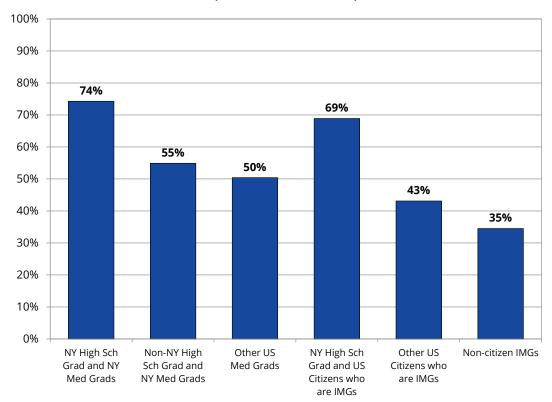

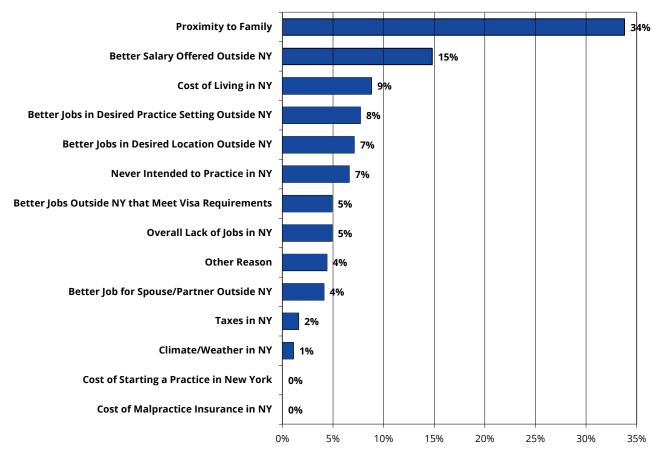

FIGURE 3.5. Principal Reason for Practicing Outside New York (for 2023 Respondents With Confirmed Practice Plans)

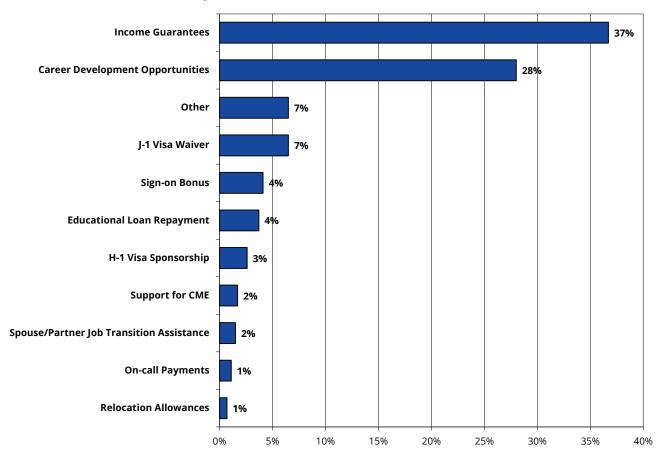

3.2 Recruitment Incentives

New physicians may receive a number of incentives to accept practice positions. These include income guarantees, career development opportunities, visa sponsorship/waivers, education loan repayment, spouse/partner job transition assistance, relocation allowances, sign-on bonuses, and payment for on-call time. Figure 3.6 displays the most influential incentives New York's graduating physicians received for accepting a practice position.

- The 2 most influential incentives for accepting a practice position reported by respondents were income guarantees (37%) and career development opportunities (28%).
 - The next most influential incentive was other reason, reported by 7% of respondents, followed by J-1 visa waiver (7%), sign-on bonus (4%), and education loan repayment (4%).
- Less than 3% of respondents indicated that support for continuing medical education (2%), spouse/partner job transition assistance (2%), on-call payments (1%), or relocation allowances (1%) was the most influential incentive.

FIGURE 3.6. Most Influential Incentive Received for Accepting a Practice Position (for 2023 Respondents With Confirmed Practice Plans)

3.3 Demographics of Practice Location

Table 3.2 summarizes the responses to 2 questions relating to the demographics of respondents' upcoming practice locations. The first 5 columns give the demographics of principal practice locations and the last column gives the percentage of graduates entering practice in federally designated Health Professional Shortage Areas (HPSAs). It should be noted that (as with all data presented in this report) these numbers are based on self-reporting by respondents, and that a large percentage said they "didn't know" if their upcoming practice fell within a HPSA.

Citizenship has a strong influence on a physician's likelihood of practicing in a HPSA. IMGs with J-1 or J-2 exchange visas are required to practice in underserved areas or return to their native country upon completion of their graduate medical education. Thus, a high proportion of respondents with exchange visas report plans to enter practice in HPSAs.

- Thirty-six percent (36%) of respondents reported confirmed plans to enter practice in inner-city locations, while only 4% had plans to practice in rural locations.
- Respondents in the following specialties were the most likely to report plans to enter practice in inner city locations: hematology/oncology (59%), pathology (55%), radiology (55%), and infectious disease (50%).
- Respondents in the following specialties were the most likely to report plans to enter practice in rural areas: family medicine (16%), cardiology (14%), and general pediatrics (10%).
- Fourteen percent (14%) reported that they would be practicing in a HPSA.
- Respondents in the following specialties were the most likely to report plans to enter practice in HPSAs: cardiology (45%), general pediatrics (44%), and critical care medicine (33%).
- IMGs who are permanent residents or citizens were slightly more likely to report plans to enter practice in HPSAs than were United States medical graduates (USMGs) (15% compared to 14%, respectively, among respondents in primary care specialties).

FIGURE 3.7. Respondents Entering Practice in Rural and Inner-City Areas by Location of Medical School and Citizenship Status (for 2023 Respondents From Primary Care Specialties With Confirmed Practice Plans)

3.4 Principal Practice Setting

Table 3.3 shows the practice settings of respondents' upcoming principal practices. The "Other" category includes freestanding health center or clinic, nursing home, and other setting.

- Thirty-seven (37%) of respondents were entering group practices.
 - Of these, 84% reported plans to join group practices as employees.
- Only 2% of all respondents reported plans to enter solo practice.
 - Adult psychiatry (12%) and ophthalmology (14%) were the only specialties in which more than 10% planned to enter solo practice.
- Fifty-seven percent (57%) of respondents reported plans to practice in hospitals.
 - Of these respondents, 56% reported plans to practice in inpatient settings, 26% in ambulatory care settings within the hospital, and 18% in emergency departments.

3.5 Expected Starting Income

Table 3.4 presents descriptive statistics for respondents' expected income in their first year of practice. Each individual's starting income was computed by summing their base salary and their expected additional/ incentive income. The number of respondents (N) is provided as some specialties had a relatively small number of respondents. Finally, specialties are ranked in descending order (ie, 1 is highest, 25 is lowest) by both mean and median expected starting incomes.

- In 2023, the mean expected starting salary for new physicians was \$323,271 and the median expected starting salary for new physicians was \$302,600.
- Although there was some overlap in the salary distributions of primary care and non-primary care physicians, non-primary care physicians generally reported higher incomes.
- Respondents in the following specialties reported the highest median starting incomes: anesthesiology (\$446,100), orthopedics (\$435,600), and cardiology (\$423,600).
- General pediatrics had the lowest median starting income of all specialties (\$190,650).
 - Other specialties with lower starting incomes included infectious disease (\$227,200) and endocrinology and metabolism (\$233,000).

FIGURE 3.11. Expected Starting Income (in \$1,000s) by Specialty Group (for 2023 Respondents With Confirmed Practice Plans)

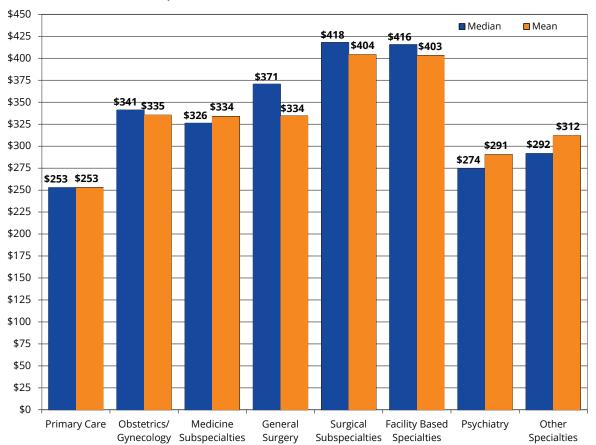

FIGURE 3.12. Distribution of Starting Income Among Primary Care and Non-Primary Care Physicians (for 2023 Respondents With Confirmed Practice Plans)

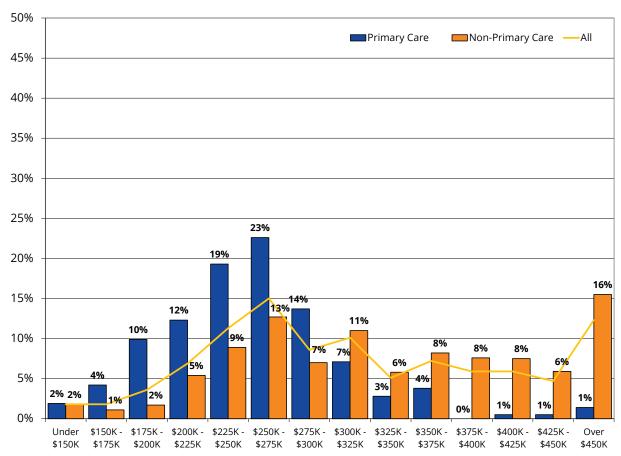

FIGURE 3.13. Rank of Median Starting Income (in \$1,000s) by Specialty (for 2023 Respondents With Confirmed Practice Plans)

3.6 Expected Weekly Patient Care/Clinical Practice Hours

Respondents were asked to estimate the number of hours per week they expected to spend in patient care/clinical practice activities in their upcoming practice positions. It is important to know how many hours new physicians anticipate they will work in their upcoming practices because this variable has an impact on issues related to workforce planning and compensation.

Table 3.5 presents data on the number of hours per week graduates expected to spend in patient care/ clinical practice activities. Gender has been found to be a significant factor in predicting the number of hours an individual may work, with females averaging fewer hours than males. Therefore, it was important to control for this factor in making comparisons across specialties. The data presented in Table 3.5 is an aggregation of all responses to this question from both the 2022 and 2023 surveys. These data provided a large enough number of respondents to allow for stratification by gender in most specialties.

- Overall, respondents reported expectations to spend an average of 43.3 hours per week in patient care/clinical practice activities.
- Female respondents expected to work 7% fewer patient care hours than male respondents (41.8 hours per week compared to 44.7 hours per week, respectively).
 - This gender difference was greatest in physical medicine and rehabilitation, with female respondents expecting to work 9.5 fewer patient hours per week than male respondents.
 - Female respondents reported expectations to work more hours than males in some specialties including ophthalmology (8.1 hours per week), endocrinology and metabolism (2.2 hours per week), and neurology (2.1 hours per week).
- Respondents in the following individual specialties reported expectations to work the highest patient care/clinical practice hours per week: general surgery (53.5 hours), anesthesiology (53.0 hours), and cardiology (51.7 hours).
- Respondents in the following specialties reported expectations to work the fewest patient care/clinical practice hours per week: emergency medicine (34.5 hours), child and adolescent psychiatry (35.8 hours), and pediatric subspecialties (36.6 hours).

FIGURE 3.14. Rank of Expected Weekly Patient Care/Clinical Practice Hours by Specialty (2022 and 2023 Respondents With Confirmed Practice Plans)

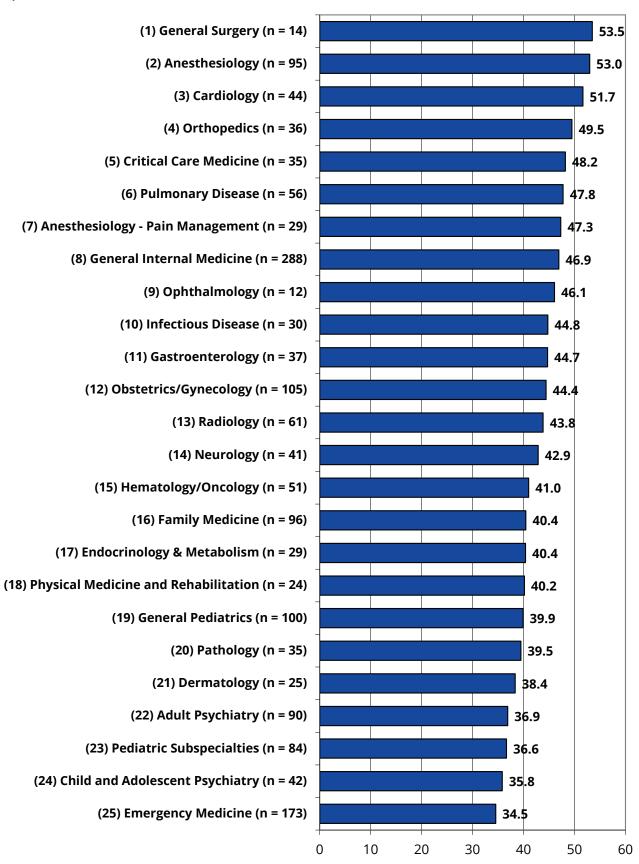

TABLE 3.5. Expected Weekly Patient Care/Clinical Practice Hours by Gender^a (2022 and 2023) Respondents With Confirmed Practice Plans)

Pediatric Subspecialties	36.2	36.9	36.6
Physical Medicine and Rehab	45.7	36.2	40.2
All Specialties, 2023	44.7	41.8	43.3

^a Patient care/clinical practice hours has been stratified by gender in any specialty with enough respondents to do so. If the number of respondents is less than 5, the hours worked are shown as ****. The data presented in this table are for respondents to both the 2022 and 2023 surveys. Patient care/clinical practice hours has been stratified by gender because females expected to work fewer hours than males.

SECTION 4: EXPERIENCES SEARCHING FOR A PRACTICE POSITION

This section summarizes the responses to several questions about residents' experiences searching for a practice position and their general perceptions of the job market in their specialty. Any respondent who reported plans to enter or who considered entering patient care/clinical practice was asked to complete these questions. The responses of IMGs on temporary visas were excluded from this section (except for Tables 4.1 and Figure 4.1) because they have more restrictions on where they can practice compared to other physicians. With few exceptions, physicians on temporary visas can remain in the US only if they practice in a state or federally designated Health Professional Shortage Area (HPSA) or continue graduate medical training. Figure 4.1 illustrates the differences between temporary visa holders and other respondents in terms of the difficulty they faced finding a job. Respondents who indicated they had not yet actively searched for a practice position have also been excluded from this section of the report.

Each subsection within Section 4 summarizes the responses to: 1) a question on the 2023 survey, 2) the aggregated total of all respondents for the 2022 and 2023 surveys, and 3) either the aggregated total of all respondents for the last 4 years the survey has been conducted or a trend over the last 4 years the survey has been conducted. For each item, specialties are ranked to determine where each specialty stands relative to all 25 specialties. In Section 4.8, a composite measure of demand is computed using all demand indicators to measure the relative demand for each specialty.

4.1 Important Job Characteristics

Table 4.1 displays respondents' assessment of how important it is to have control over certain job characteristics. Respondents were asked to give their assessment by choosing from a 4-point Likert scale. In order to make comparisons across specialties the following Likert scale was developed: "Not Important at All" = 1, "Of Little Importance" = 2, "Important" = 3, and "Very Important" = 4.

Highlights

Overall, respondents indicated that having control over the frequency of overnight calls (score
of 3.52) and weekend duties (score of 3.51) was most important, followed by length of each
workday (score of 3.36), and predictable start and end time each workday (3.30).

TABLE 4.1. Mean Likert Scores for Importance of Control Over Certain Job Characteristics by Specialty (for 2023 Respondents Who Had Searched for a Job)

	Predictable		Frequency of	Frequency of	
	Start and End	Length of Each	Overnight	Weekend	
Specialty	Time Each Day	Workday	Calls	Duties

4.2 Difficulty Finding a Satisfactory Practice Position

Table 4.2 shows the percent of respondents who reported difficulty finding a satisfactory practice position. As noted above, this table summarizes the responses for the 2023 survey, the aggregated total of responses for 2022 and 2023, and the aggregated responses for the last 4 years of the survey.

Highlights

- Seventeen percent (17%) of respondents reported difficulty finding a satisfactory position in 2023.
- The most often cited main reason for difficulty finding a satisfactory practice position was lack of jobs in desired locations (31%), followed by inadequate salary/compensation offered (24%), and lack of jobs in desired practice setting (20%).
- The specialties with the highest percentage of respondents having difficulty finding a satisfactory practice position in 2023 were: critical care medicine (40%), ophthalmology (40%), physical medicine and rehabilitation (39%), and general surgery (36%).
- The specialties with the lowest percentage of respondents having difficulty finding a satisfactory practice position in 2023 were: endocrinology and metabolism (0%), anesthesiology (5%), adult psychiatry (7%), and emergency medicine (9%).
- The specialties with the highest percentage of respondents reporting difficulty finding a satisfactory position for the last 2 years of the survey (2022 and 2023 aggregated) were: pain management (38%), general surgery (36%), and physical medicine and rehabilitation (32%).
- The specialties with the highest percentage of respondents reporting difficulty finding a satisfactory position for the last 4 years of the survey were: pain management (42%), general surgery (39%), and endocrinology and metabolism (37%).

Figure 4.1 presents the differences in job market experiences of respondents based on their citizenship status and location of medical school. Historically, IMGs on temporary visas have experienced much greater difficulty due to their visa status compared to USMGs and IMG citizens and permanent residents.

FIGURE 4.1. Percentage Having Difficulty Finding a Satisfactory Practice Position and Having to Change Plans Due to Limited Practice Opportunities by Location of Medical School and Citizenship Status (for 2023 Respondents Who Had Searched for a Job)

4.3 Changing Plans Due to Limited Practice Opportunities

Table 4.3 displays the percentage of respondents who had to change their plans due to limited practice opportunities. The columns in this table are analogous to those presented in Table 4.2.

- Ten percent (10%) of respondents reported having to change their plans due to limited practice opportunities in 2023.
- The specialties with the highest percentage of respondents who had to change plans due to limited practice opportunities in 2023 were: pathology (21%), critical care medicine (20%), general surgery (20%), ophthalmology (20%), and child and adolescent psychiatry (19%).
- The specialties with the lowest percentage of respondents who had to change plans due to limited practice opportunities in 2023 were: dermatology (0%), infectious disease (0%), anesthesiology (3%), adult psychiatry (4%), and family medicine (4%).
- The specialties with the highest percentage of respondents who had to change their plans due to limited practice opportunities over the last 2 years (aggregated results from the 2022 and 2023 surveys) were: general surgery (24%), pathology (19%), and neurology (18%).
- The specialties with the lowest percentage of respondents who had to change their plans due to limited practice opportunities over the last 2 years (aggregated results from the 2022 and 2023 surveys) were: infectious disease (0%), adult psychiatry (2%), and dermatology (4%).
- The specialties with the highest percentage of respondents who had to change plans over the last 4 years of the survey were: general surgery (24%), pathology (24%), critical care medicine (23%), and physical medicine and rehabilitation (21%).
- The specialties with the lowest percentage of respondents who had to change plans over the last 4 years of the survey were: adult psychiatry (3%), infectious disease (5%), anesthesiology (5%), and family medicine (9%).

4.4 Job Offers

Table 4.4 shows the mean number of offers for employment/practice opportunities (ie, job offers) received by respondents. This indicator, like starting income, is a robust measure of demand as it represents an objective number, less subject to the bias respondents' expectations than the other indicators such as difficulty finding a practice opportunity or the respondents' assessment of the job market in a specialty. Job offers, along with starting income trends, are double-weighted in the composite measure of demand presented later in this section of the report.

- The average number of job offers received by respondents in 2023 was 3.37.
- Respondents in the following specialties received the most job offers in 2023: anesthesiology (5.04), obstetrics/gynecology (4.56), and child and adolescent psychiatry (4.45).
- Respondents in the following specialties received the fewest job offers in 2023: physical medicine and rehabilitation (1.92), pathology (2.26), and critical care medicine (2.67).
- The following specialties received the most job offers for the last 2 years of the survey (2022 and 2023 aggregated): child and adolescent psychiatry (4.67), anesthesiology (4.59), and gastroenterology (4.48).
- The following specialties received the fewest job offers for the last 2 years of the survey (2022 and 2023 aggregated): pathology (2.25), physical medicine and rehabilitation (2.36), and emergency medicine (2.47).
- The following specialties experienced the greatest annual increases in job offers received over the past 5 years (2018-2019, 2021-2023): ophthalmology (+22%), child and adolescent psychiatry (+15%), and pathology (+12%).
- The following specialties experienced the greatest annual declines in job offers received over the past 5 years (2018-2019, 2021-2023): general internal medicine (-4%), pain management (-4%), adult psychiatry (-4%), physical medicine and rehabilitation (-3%), and dermatology (-2%).

4.5 Perceptions of the Regional Job Market

Table 4.5 presents respondents' perceptions of the regional job market for their specialty (ie, within 50 miles of the site at which they trained). Respondents were asked to give their assessment of the regional job market by choosing from a 5-point scale. In order to make comparisons across specialties and across surveys, the following scoring scheme was developed: "No Jobs" = -2, "Very Few Jobs" = -1, "Few Jobs" = 0, "Some Jobs" = +1, and "Many Jobs" = +2. A composite score was then computed for each specialty by multiplying the score for each respondent by the proportion of responses in that category.

- Overall, respondents assessed the regional job market positively, with an average score in 2023 of +1.26.
- Respondents in the following specialties reported the most positive views of the regional job market: child and adolescent psychiatry (+2.00), anesthesiology (+1.91), and adult psychiatry (+1.78).
- Respondents in the following specialties reported the least positive views of the regional job market: pathology (+0.39), pediatric subspecialties (+0.56), orthopedics (+0.56), and physical medicine and rehabilitation (+0.77).
- Over the past 2 years (2022, 2023), respondents in the following specialties reported the most positive views of the regional job market: child and adolescent psychiatry (+1.89), anesthesiology (+1.82), and adult psychiatry (+1.79).
- Over the past 2 years (2022, 2023), respondents in the following specialties reported the least positive views of the regional job market: general surgery (+0.33), pediatric subspecialties (+0.42), and pathology (+0.61).
- Over the past 4 years (2019, 2021-2023), respondents in the following specialties reported the most positive views of the regional job market: adult psychiatry (+1.82), child and adolescent psychiatry (+1.74), and anesthesiology (+1.68).
- Over the past 4 years (2019, 2021-2023), respondents in the following specialties reported the least positive views of the regional job market: general surgery (+0.02), pediatric subspecialties (+0.29), and pathology (+0.51).

4.6 Perceptions of the National Job Market

Table 4.6 presents the perceptions of survey respondents concerning the national job market for their specialty. The response choices and composite scores were the same as those used in Table 4.5 (referring to the regional job market). There was a high degree of correlation between respondents' views of the regional and the national job markets. In general, however, the national job market was viewed more positively than the regional job market.

Highlights

- Overall, respondents had very positive perceptions of the national job market.
 - Seventy-three percent (73%) reported that there were "Many Jobs" in their specialty, and
 0% reported that there were "No Jobs."
- Respondents assessed the national job market (average score of +1.66) more positively than the regional job market (average score of +1.26).
- Respondents in the following specialties reported the most positive views of the national job market: child and adolescent psychiatry (+2.00), infectious disease (+2.00), endocrinology and metabolism (+2.00), anesthesiology (+1.96), adult psychiatry (+1.96), and hematology/oncology (+1.94).
- Respondents in the following specialties reported the least positive views of the national job market: pathology (+1.00), physical medicine and rehabilitation (+1.23), and orthopedics (+1.36).
- Over the past 2 years (2022, 2023), respondents in the following specialties reported the most positive views of the national job market: child and adolescent psychiatry (+1.97), adult psychiatry (+1.96), and infectious disease (+1.95).
- Over the past 2 years (2022, 2023), respondents in the following specialties reported the least positive views of the national job market: general surgery (1.00), emergency medicine (+1.16), and pediatric subspecialties (+1.25).
- Over the past 4 years (2019, 2021-2023), respondents in the following specialties reported the most positive views of the national job market: adult psychiatry (+1.97), child and adolescent psychiatry (+1.95), and family medicine (+1.85).
- Over the past 4 years (2019, 2021-2023), respondents in the following specialties reported the least positive views of the national job market: emergency medicine (+1.10), pediatric subspecialties (+1.10), general surgery (+1.17), and pathology (+1.20).

4.7 Trends in Starting Income

Table 4.7 presents median starting income levels for 2023 respondents, for all respondents from the last 2 surveys (2022 and 2023), and the average annual change (ie, trend) in median starting income from the last 5 surveys (2018-2019, 2021-2023). Income levels are often used to measure demand. Physicians are somewhat atypical in this regard because their income levels are largely determined by historic reimbursement amounts rather than by the demand for their services at any given point in time.

Although income levels may not be completely accurate in determining demand, trends in income provide a good indicator. If physicians practicing in a given specialty are in short supply relative to the demand for their services, employers will have to increase compensation levels to attract applicants, causing income levels to trend higher. Conversely, if there is a rich supply of physicians in a certain specialty, employers will not need to pay as much to fill positions, resulting in flat or negative trends in income.

Highlights

- The median starting income of 2023 respondents was \$302,600.
 - Median starting income in 2023 was 7% higher than in 2022.
 - The average annual increase in income for new physicians from 2018 to 2023 was 5%.
- Most specialties experienced moderate growth in starting incomes from 2018 to 2023.
- The following specialties experienced the largest annual increases in income between 2018 and 2023: ophthalmology (13%), obstetrics/gynecology (8%), neurology (8%), hematology/oncology (8%), gastroenterology (8%), and anesthesiology (7%).
- The following specialties experienced the least growth in starting income during this time period: physical medicine and rehabilitation (0%), emergency medicine (1%), endocrinology and metabolism (1%), and general pediatrics (2%).

FIGURE 4.15. Median Starting Income (in \$1,000s) by Specialty Group (for Respondents With Confirmed Practice Plans)

Total (All Specialties)	\$302,600	N/A	\$292,100	N/A	5%	N/A

4.8 Assessment of Relative Demand by Specialty

To measure the demand for new physicians, a composite score was computed by taking the median of the ranks on each of the demand indicators (ie, where each specialty stood relative to all 25 specialties) for each specialty with the observations from the most recent 4 years of the survey (2019, 2021-2023). Observations from more recent years of the survey received a greater weight than observations from previous years. That is, when calculating the demand score for 2023, data from 2023 were weighted by a factor of 0.40, data from 2022 were weighted by a factor of 0.30, data from 2021 were weighted by a factor of 0.20, and data from 2019 were weighted by a factor of 0.10.

The following variables were used as indicators of demand in the calculations described above:

- Percentage of respondents having difficulty finding a satisfactory practice position
- Percentage of respondents having to change plans due to limited practice opportunities
- Mean number of job offers received by respondents
- Respondents' views of the regional job market in their specialty
- Respondents' views of the national job market in their specialty
- Trends in median starting income

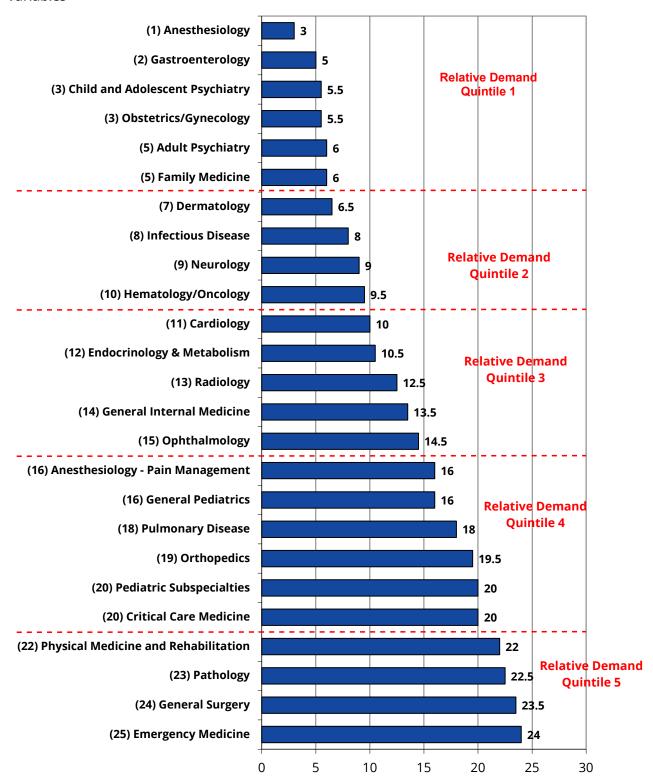

Each of these indicators is an imperfect measure of demand. However, combined, they provide a composite picture of relative demand by specialty. There is a high degree of correlation between the percent of respondents having difficulty indicator and the percent of respondents having to change plans indicator (ie, a respondent reporting difficulty was also likely to report having to change plans). There was also a high degree of correlation between respondents' assessments of the regional and national job market in their specialty. Due to the correlations between these 2 sets of indicators, the job offers and trends in starting income indicators were weighed more heavily in the computation of the composite measure of new physician demand.

Note that the composite measure does not reflect absolute demand for new physicians (ie, determine the appropriate number of physicians necessary to serve a given population). Instead, it reflects the demand for each specialty relative to other specialties. Figure 4.18 is a plot of the composite relative demand score for each specialty.

Highlights

- In 2023, anesthesiology (average rank of 3.0 out of 25), gastroenterology (5.0), child and adolescent psychiatry (5.5), obstetrics/gynecology (5.5), adult psychiatry (6.0) and family medicine (6.0) experienced the strongest demand.
- The job market for emergency medicine (24.0), general surgery (23.5), pathology (22.5), and physical medicine and rehabilitation (22.0) was weak relative to other specialties.

FIGURE 4.18. Assessment of Current Relative Demand by Specialty, Median Rank of Demand Related Variables

^a Specialties shaded in gold are not broken out in this report because of the small number of respondents. Instead their numbers have been aggregated into groups as shown in this table.

^b Downstate NY includes New York City, Long Island, and Westchester County. Upstate NY includes the rest of the state.

^c Adding up physicians by specialty and region will not reflect the total sample size due to missing data.

APPENDIX B

SURVEY OF RESIDENTS COMPLETING TRAINING IN NY IN 2023

YOUR INFORMATION

1.	ACGME Residency Program Number:	
	Format: XXX-XX-XXX	
	Last Name	
	First Name	
2.	Main hospital at which you did your training:	
	○ Albany Medical Center	 Mid-Hudson Family Health Services/Kingston Hospital
	O Arnot Ogden Medical Center	Montefiore Medical Center/Albert Einstein College
	O Bronx-Lebanon Hospital Center	of Medicine
	O Brookdale University Hospital and Medical Center	O Montefiore New Rochelle
	○ Brooklyn Hospital Center	○ Mount Sinai – Beth Israel
	○ Coney Island Hospital	○ Mount Sinai – Morningside
	○ Creedmoor Psychiatric Center	O Mount Sinai South Nassau
	○ Ellis Hospital	O Mount Sinai West
	O Flushing Hospital Medical Center	O Nassau University Medical Center
	○ Garnet Health Medical Center	O New York Blood Center
	○ Good Samaritan Hospital Medical Center	New York City Department of Health and Mental
	○ Harlem Hospital Center	Hygiene
	○ Hospital for Special Surgery	•
	O Icahn School of Medicine at Mount Sinai	 New York Presbyterian Brooklyn Methodist Hospital
	○ IFH Harlem Residency in Family Medicine	O New York Presbyterian Hospital-Columbia Campus
	○ Jacobi Medical Center	O New York Presbyterian Hospital-Cornell Campus
	O Jamaica Hospital Medical Center	New York Presbyterian Hospital-Westchester
	O Kingsbrook Jewish Medical Center	Division
	\bigcirc Laser and Skin Surgery Center of New York	New York University Langone Medical Center
	○ Lenox Hill Hospital	O Northwell Health - Forest Hills
	O Lincoln Medical and Mental Health Center	○ Northwell Health - Glen Cove
	Maimonides Medical Center	O Northwell Health - North Shore-LlJ
	O Mary Imogene Bassett Hospital	O Northwell Health - Plainview
	Memorial-Sloan Kettering Cancer Center	O Northwell Health - Southside
	Metropolitan Hospital Center	○ NYU Winthrop Hospital
		Office of Chief Medical Evaminer-City of New York

 Richmond University Medical Center 	O SUNY Health Science Center at Stony Brook
O Rochester General Hospital	O SUNY Health Science Center at Syracuse
○ St. Barnabas Hospital	○ The Mount Vernon Hospital
○ St. Elizabeth's Medical Center	O UHS Wilson Medical Center
○ St. John's Episcopal Hospital, South Shore	O Univeristy of Buffalo Jacobs School of Medicine
○ St. Joseph's Hospital Health Center	and Biomedical Sciences
○ St. Joseph's Medical Center	Westchester Medical Center
Staten Island University Hospital	Woodhull Medical and Mental Health Center
 Strong Memorial Hospital of the University of Rochester 	 Wyckoff Heights Medical Center Other:
○ SUNY Health Science Center at Brooklyn	
BACKGROUND	
3. Gender	
○ Female	O Prefer not to disclose
○ Male	O Prefer to self-describe:
○ Nonbinary	
4. Age	_
5. Citizenship Status	
○ Native born US	○ H-1, H-2, H-3 Temporary worker
○ Naturalized US	○ J-1, J-2 Exchange visitor
O Permanent resident	
6. Are you of Hispanic/Latino origin?	
○ Yes	
○ No	
7. What is your race? (Mark all that apply)	
○ American Indian/Alaska Native	Native Hawaiian/Other Pacific Islander
○ Asian	○ White
○ Black/African American	○ Other
8. Which best describes your current relationship status?	
○ Now Married	O Divorced/Separated/Widowed (skip to Question 10)
○ In Long-term Relationship	 Never Married/Single (skip to Question 10)

9. Is your partner also a physician?Yes	
○ No	
Ouestion does not apply	
10. Do you have any dependent children?	
○ Yes	
○ No	
11. Where did you live when you graduated from high scho	
○ New York	○ Canada
○ Other US state	Other country
MEDICAL EDUCATION AND TRAINING	
12. At the end of your current year of training, how many t completed in the US?	otal years of post-graduate training will you have
O 1	0 4
○ 2	○ 5
○ 3	○ 6 or more
13. Type of Medical Education:	
○ Allopathic (MD)	
Osteopathic (DO)	
14. Medical School Attended:	
O New York (If yes, complete Question 15)	 Canada (If yes, skip to Question 16)
Other state in the US (If yes, skip to Question 16)	Other country (If yes, skip to Question 16)
15. Specify NY Medical School:	
Albany Medical College	Stony Brook University Medical Center School of Madicina CUANY
 Albert Einstein College of Medicine of Yeshiva University 	Medicine, SUNY SUNY Downstate Medical Center College of Medicine
 Columbia University College of Physicians and Surgeons 	icine O Touro College of Osteopathic Medicine
○ CUNY School of Medicine	○ University at Buffalo School of Medicine & Bio-
O Hofstra North Shore-LIJ School of Medicine	medical Sciences, SUNY
O Icahn School of Medicine at Mount Sinai	 University of Rochester School of Medicine & Dentistry
O New York Medical College (Valhalla)	 Upstate Medical University, SUNY
O NYIT College of Osteopathic Medicine	Weill Cornell Medical College
 New York University School of Medicine 	

16. WI	hat is your current level of educational debt?	
0	None	\$200,000-\$249,999
0	Less than \$50,000	\$250,000-\$299,999
0	\$50,000-\$99,999	\$300,000-\$349,999
0	\$100,000-\$149,999	\$350,000-\$399,999
0	\$150,000-\$199,999	○ \$400,000 and over
17. Spe	ecialty you are COMPLETING in 2023 (Mark only one):	
0	Allergy and Immunology	Pathology (General)
0	Anesthesiology (General)	Pathology (Subspecialty)-Specify:
0	Anesthesiology - Pain Management	
0	Other Anesthesiology Subspecialty–Specify:	Pediatrics (General)
-		O Pediatrics (Subspecialty)-Specify:
0	Dermatology	
0	Emergency Medicine	O Physical Medicine and Rehabilitation
0	Family Medicine	O Preventive Medicine/Public Health/Occupational
0	Internal Medicine (General)	Medicine
0	Cardiology	Psychiatry
0	Critical Care Medicine	 Child and Adolescent Psychiatry
0	Endocrinology and Metabolism	Other Psychiatry Subspecialty-Specify:
0	Gastroenterology	
0	Geriatrics	Radiology (Diagnostic)
0	Hematology/Oncology	Radiology (Therapeutic)
0	Infectious Disease	○ Surgery (General)
0	Nephrology	Cardio-Thoracic Surgery
0	Pulmonary Disease/CCM	Neurological Surgery
0	Rheumatology	Ophthalmology
0	Other Internal Medicine Subspecialty–Specify:	Orthopedic Surgery
-		○ Otolaryngology
0	Internal Medicine and Pediatrics (Combined)	○ Plastic Surgery
0	Neurology	○ Urology
0	Nuclear Medicine	Other Surgical Subspecialty-Specify:
0	Obstetrics and Gynecology (General)	
0	Obstetrics and Gynecology (Subspecialty)-	Other-Specify:

18.	3. What do you expect to be doing after completion of your current training program?										
	O Patient care/clinical ption)	oractice (in	non-traini	ng posi-		aching/res			g position)		
	 Additional subspecia 	hip	 Temporarily out of medicine 								
	(Specify specialty):	○ Otl	ner (Specif	y):							
	○ Chief resident				○ Un	decided/d	on't know <u>y</u>	/et

	○ \$20,000-\$24,999	\$55,000-\$59,999	
	○ \$25,000-\$29,999	\$60,000 and over, please specify:	
38.	For the practice position you accepted, did you accept the first salary or did you negotiate salary?		
	○ Accepted first offer		
	○ Negotiated salary		
39.	What is your level of satisfaction with your salary/compensation?		
	○ Very dissatisfied	 Somewhat satisfied 	
	 Somewhat dissatisfied 	○ Very satisfied	
EXI	PERIENCE IN JOB MARKET		
If yo	ou are going into patient care or have considered going into	p patient care, please complete the following.	
40.	Did you have difficulty finding a practice position you were ○ Yes ○ No	e satisfied with?	
	O Haven't looked yet (skip to Question 43)		

41.	hat would you say was the main reason?				
	Overall lack of jobs/practice opportunities	O Inadequate salary/compensation offered			
	 Lack of jobs/practice opportunities that meet visa status requirements 	 Lack of employment opportunities for spouse/ partner 			
	 Lack of jobs/practice opportunities in desired locations 	Other (Specify):			
	 Lack of jobs/practice opportunities in desired practice setting (eg, hospital, group practice) 				
42.	Did you have to change your plans because of limited practice opportunities?				
	○ Yes				
	○ No				
	○ Haven't looked yet				
43.	How many offers for practice positions did you receive (excluding fellowships, chief residency, and oth training positions)?				
	○ None	O 4			
	○ 1	○ 5			
	○ 2	○ 6-10			
	○ 3	○ Over 10			
44. What is your overall assessment of practice opportunities in your specialty, where you trained?		n your specialty, and within 50 miles of the site			
	○ No jobs	○ Some jobs			
	○ Very few jobs	○ Many jobs			
	○ Few jobs	○ Unknown			
45.	What is your overall assessment of practice opportunities in your specialty nationally?				
	○ No jobs	○ Some jobs			
	○ Very few jobs	○ Many jobs			
	○ Few jobs	○ Unknown			

Thank you for completing this important survey!

ABOUT THE AUTHORS

Jinman Pang, PhD

Research Scientist, Center for Health Workforce Studies

Dr. Pang conducts data analysis, updates federal data sources, and conducts literature reviews, among other tasks as needed. Dr. Pang specializes in health econometrics, applied microeconomics, data analysis, modeling, and forecasting. She has PhD in Economics from the University at Albany.

David Armstrong, PhD

Project Director, Center for Health Workforce Studies

Working for CHWS since 2003, Dr. Armstrong has an extensive background in conducting health workforce studies and has produced multiple reports on the health care workforce in New York and the US. He manages CHWS' annual New York Resident Exit Survey, which collects information about residents' demographic characteristics and post-graduation plans. Dr. Armstrong also is the director of the Health Workforce Technical Assistance Center, which provides assistance to individuals, organizations, and states engaged in health workforce planning.

Sage Shirey, BA

Research Associate, Center for Health Workforce Studies

Mr. Shirey assists with literary reviews, research reports, key informant interviews, and record keeping. Specializing in qualitative social research, he holds a BA in Sociology from the College of Wooster (OH) and is currently enrolled in the Masters of Sociology program at the University at Albany.
